CC AGGREGATE TO FORM DIMERS, TETRAMERS, AND HIGHER POLYMERS.
CC -!- DISORDER: HEREDITARY ELLIPTOCYTOSIS (HE) IS A HETEROGENEOUS
CC DISEASE CHARACTERIZED BY VARIABLE HEMOLYTIC ANEMIA AND ELLIPTICAL
CC RED CELL SHAPE. SEVERAL ABNORMALITIES IN THE MEMBRANE SKELETON
CC HAVE BEEN IDENTIFIED IN HE, INCLUDING A NUMBER THAT HAVE BEEN
CC LOCALIZED TO SPECTRIN. ALSO INVOLVED IN HEREDITARY SPHEROCYTOSIS
CC (HS).
CC -!- THIS COMPLEX IS ANCHORED TO THE CYTOPLASMIC FACE OF THE PLASMA
CC MEMBRANE VIA ANOTHER PROTEIN, ANKYRIN, WHICH BINDS TO BETA-
CC SPECTRIN AND MEDIATES THE BINDING OF THE WHOLE COMPLEX TO A
CC TRANSMEMBRANE PROTEIN BAND 3. THE INTERACTION OF ERYTHROCYTE
CC SPECTRIN WITH OTHER PROTEINS THROUGH SPECIFIC BINDING DOMAINS
CC LEAD TO THE FORMATION OF AN EXTENSIVE SUBPLASMALEMAL MESHWORK
CC WHICH IS THOUGHT TO BE RESPONSIBLE FOR THE MAINTENANCE OF THE
CC BICONCAVE SHAPE OF HUMAN ERYTHROCYTES, FOR THE REGULATION OF THE
CC PLASMA MEMBRANE COMPONENTS AND FOR THE MAINTENANCE OF THE LIPID
CC ASYMMETRY OF THE PLASMA MEMBRANE.
CC -!- ALTERNATIVE PRODUCTS: A MUSCLE-SPECIFIC FORM IS PRODUCED BY
CC ALTERNATIVE SPLICING.
CC -!- SIMILARITY: BELONGS TO THE SPECTRIN FAMILY.

PT Gene encoding new semaphorin nerve growth inhibitor - useful in
PT diagnosis, treatment and study of neurological diseases
PS Claim 1; Page 33-37; 49pp; Japanese.
CC The present sequence represents human semaphorin, a nerve growth
CC inhibitor. The semaphorin protein, and gene encoding the protein,
CC and their derivatives, are used in the diagnosis, treatment and
CC study of neurological disorders such as atopic skin inflammation,
CC autoimmune diseases and pain.

 PT New antibody to human collapsin - used to inhibit the activity of
 PT collapsin, to induce neurite out-growth and to treat individuals with
 PT nerve damage.
 PS Claim 2: Columns 15-18; lipp; English.
 CC An antibody capable of specifically binding at least a portion of
 CC the collapsin protein can be used to purify human collapsin and
 CC to inhibit the activity of the protein. It can be used to induce
 CC neurite outgrowth by neuronal cells and to treat individuals
 CC suffering from nerve damage.

PT Activation of glucose-repressed pathways in yeast in presence of
PT glucose - by introduction of activator protein into cell, useful for
PT increased biomass, e.g. for heterologous protein production
PS Disclosure; Fig 6; 72pp; English.
CC This sequence is the yeast HAP4 protein. It can be used in the
CC method of the invention for providing a microorganism which has a
CC preferred metabolic pathway in the presence of a certain carbon source,
CC with the ability to inhibit or circumvent that pathway, comprises
CC providing the microorganism with ability to derepress or circumvent the
CC repression of the non-preferred pathway in the presence of the C source.
CC The method allows the culturing of an increased biomass of yeast per
CC consumed unit of glucose. This has applications in the baking industry,
CC as sources of flavour-enhancing yeast extracts, for the production of
CC metabolites and heterologous gene products, e.g. enzymes, precursors for
CC chemicals, biosurfactants, fatty acids, especially for the
CC pharmaceutical, agricultural and food sectors. The method allows the
CC activation of metabolic pathways, e.g. the oxidative pathways, even in
CC the presence of glucose. It also results in a decreased amount of the
CC fermentative by-product ethanol.

PT Vaccines against Mycobacterium containing major extracellular
PT proteins - used to, e.g. induce protective and therapeutic immune
PT responses, and for detecting an immune response
PS Example 28; Page 96; 236pp; English.
CC Sequences shown in W75587 to W75641 represent synthetic peptides derived
CC from the native 30kD major secretory protein of M. tuberculosis. These
CC peptides are used for splenic lymphocyte proliferation assays to identify
CC the immunodominant T-cell epitope of the 30kD protein. The invention
CC provides an agent for vaccinating mammals against Mycobacterium. The
CC agent comprises at least one of the major abundant extracellular 110,
CC 80, 71, 58, 45, 32A, 32B, 30, 24, 23.5, 23, 16, 14 or 12 kD proteins of
CC M. tuberculosis, or at least 1 of their immunodominant epitopes and
CC interleukin-12 (IL-12) or MF59 as adjuvants. The agent containing the
CC nucleic acid encoding the extracellular products are used to raise a
CC protective or therapeutic immune response against Mycobacterium,
CC specifically M. tuberculosis. The immunodominant epitopes can also be
CC used (typically in a cutaneous hypersensitivity test) to detect an
CC immune response to vaccination. Preparation of the agent does not require
CC selection of the most immunogenic products, so large scale production and
CC purification are easy, resulting in a consistent, standardised
CC formulation, having lower toxicity than killed or attenuated vaccines.
CC The agents provide a rapid and effective response (including a strong
CC cell-mediated component) and are safe even in immunocompromised subjects.
CC They prevent development of an opsonising humoral response that might
CC spread intracellular pathogens.

PT Vaccines against Mycobacterium containing major extracellular
PT proteins - used to, e.g. induce protective and therapeutic immune
PT responses, and for detecting an immune response
PS Cidm 13; Page 203; 236pp; English.
CC This is an immunodominant peptide epitope from the M. tuberculosis 32A kD
CC protein. Sequences shown in W75642 to W75698 represent synthetic peptides
CC derived from the native 32A kD major secretory protein of Mycobacterium
CC tuberculosis. These peptides are used for identifying the immunodominant
CC T-cell epitope of the 32A kD protein. The invention provides an agent for
CC vaccinating mammals against Mycobacterium. The agent comprises at least
CC one of the major abundant extracellular 110, 80, 71, 58, 45, 32A, 32B,
CC 30, 24, 23.5, 23, 16, 14 or 12 kD proteins of M. tuberculosis, or at
CC least 1 of their immunodominant epitopes and interleukin-12 (IL-12) or
CC MF59 as adjuvants. The agent containing the nucleic acid encoding the
CC extracellular products are used to raise a protective or therapeutic
CC immune response against Mycobacterium, specifically M. tuberculosis.
CC The immunodominant epitopes can also be used (typically in a cutaneous
CC hypersensitivity test) to detect an immune response to vaccination.
CC Preparation of the agent does not require selection of the most
CC immunogenic products, so large scale production and purification are
CC easy, resulting in a consistent, standardised formulation, having lower
CC toxicity than killed or attenuated vaccines. The agents provide a rapid
CC and effective response (including a strong cell-mediated component) and
CC are safe even in immunocompromised subjects. They prevent development of
CC an opsonising humoral response that might spread intracellular pathogens.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Detection of modulators of Mena and Ena-VASP-like genes and proteins
PT - used in control of cytoskeletal dynamic events in normal and
PT abnormal cell morphology, adhesion, motility, growth and
PT differentiation
PS Example 1; Page 67-68; 77pp; English.
CC This polypeptide comprises novel murine Ena-VASP like protein Evl.
CC Its amino acid sequence was deduced from a cDNA clone (see V02997)
CC obtained from a mouse embryonic stem cell cDNA library. 2 Novel
CC mammalian genes, mammalian Ena (Mena, see V02996) and Evl, encoding
CC novel proteins Mena (see W37148) and Evl are disclosed. Mena and
CC Evl proteins have a discrete, EVH1 functional domain responsible
CC for Mena binding to Listeria, and to the cytoskeletal proteins
CC zyxin and vinculin. Based on the disclosed Mena and Evl genes and
CC proteins, a variety of methods and compositions are provided for
CC screening, isolating and characterising endogenous and exogenous
CC factors, drugs and therapeutic agents useful to evaluate and/or
CC control cytoskeletal dynamic events involved in normal and abnormal

CC cell morphology, adhesion, motility, growth and/or differentiation.
CC A method of detecting a modulator of Mena activity/expression is
CC claimed.

PS Example 1; Page 54-56; 77pp; English.

CC This polypeptide comprises murine Mena (mammalian Ena) that shows

CC significant amino acid similarity to Drosophila Ena and which

CC exhibits a broad pattern of tissue distribution in neurons,

CC fibroblasts, kidney epithelium, muscle, neural crest and

CC haematopoietic cells. Its amino acid sequence was deduced from

CC a cDNA clone (see V02996) obtained from a mouse embryonic stem cell

CC cDNA library. 2 Novel mammalian genes, Mena and Ena-VASP-like

CC (Evi, see V02997), encoding novel proteins Mena and Evi (see

CC W37149) are disclosed. Mena and Evi proteins have a discrete, EVH1

CC functional domain responsible for Mena binding to Listeria, and to

CC the cytoskeletal proteins zyxin and vinculin. The EVH1 domain of

CC Mena is also responsible and sufficient for targeting localisation

CC of Mena and Mena-based fusion proteins to focal adhesions, and to

CC the surface of Listeria cells at the polar site of induction of

CC actin comet tail formation. Based on the disclosed Mena and Evi

CC genes and proteins, a variety of methods and compositions are
CC provided for screening, isolating and characterising endogenous and
CC exogenous factors, drugs and therapeutic agents useful to evaluate
CC and/or control cytoskeletal dynamic events involved in normal and
CC abnormal cell morphology, adhesion, motility, growth and/or
CC differentiation. A method of detecting a modulator of Mena
CC activity/expression is claimed.

FT differentiation
FT Example 1; Page 68-70; 77pp; English.
FT This polypeptide comprises a consensus of novel murine mammalian Ena
FT (Mena) protein (see W37148) and novel murine Ena-VASP like protein
FT Evi (see W37149). The greatest degree of amino acid identity is
FT in the N-terminal Ena-VASP homology domain 1 that is responsible
FT for Mena binding to Listeria, and to the cytoskeletal proteins
FT CC xilin and vinculin. The C-terminal homology domain contains a
FT CC putative G-actin binding sequence and a conserved charge cluster.
FT CC Based on the disclosed Mena and Evi genes and proteins, a variety
FT CC of methods and compositions are provided for screening, isolating
FT CC and characterising endogenous and exogenous factors, drugs and
FT CC therapeutic agents useful to evaluate and/or control cytoskeletal
FT CC dynamic events involved in normal and abnormal cell morphology,
FT CC adhesion, motility, growth and/or differentiation. A method of
FT CC detecting a modulator of Mena activity/expression is claimed.

PT Synthesis of composite nucleic acid molecules - by chain reaction
PT cloning using nucleic acid molecules, a bridging oligo-nucleotide
PT and a thermostable ligase
PS Disclosure: Page 40; 69pp; English.
CC This sequence represents the kanamycin resistance protein adenyl
CC 4'-nucleotidyltransferase type Ia (ant(4')-Ia). DNA encoding this
CC sequence is stated in the specification as being chimeric. The promoter
CC and terminator regions are stated as being from a different gene, however
CC no indication is given as to which portions of this sequence are from the
CC other gene, or which organism the other gene is from. This sequence can
CC be synthesised using the method of the invention, which is for
CC synthesising a composite nucleic acid molecule (NAM) by ligating a first
CC NAM to a second NAM. The methods provide for the generation of larger
CC NAMs from smaller ones without the need to treat the ends in such a way
CC to ensure specific binding of two molecules in correct orientation. They
CC can be used for the site specific ligation of DNA fragments generated by
CC restriction enzyme digestion, DNase digestion, chemical cleavage,
CC enzymatic or chemical synthesis, particularly for ligation of PCR
CC products.

PT used to prepare PHL which can be used in the amidation of
PT peptide(s) e.g. human calcitonin.
PS Claim 4; Page 18; 28pp; English.

CC The sequence was deduced from a cDNA insert from pAE-III-202-4
CC (FERM BP-3172). The vector serves as a source for a DNA fragment
CC encoding PHL for the construction of an expression vector for the
CC prepn. of recombinant PHL. The protein may be truncated to
CC comprise only residues 383-706 or 383-713. The PHL catalyses the
CC reaction: R-GlyOH -> R-NH2. It can be used to produce peptides with
CC amidated C-termini, e.g. calcitonin, growth hormone, LH-RH.

PT Synthesis of composite nucleic acid molecules - by chain reaction
PT cloning using nucleic acid molecules, a bridging oligo-nucleotide
PT and a thermostable ligase
PS Disclosure: Page 40; 69pp; English.

CC This sequence represents the kanamycin resistance protein adenyl
CC 4'-nucleotidyltransferase type Ia (ant(4')-Ia). DNA encoding this
CC sequence is stated in the specification as being chimeric. The promoter
CC and terminator regions are stated as being from a different gene, however
CC no indication is given as to which portions of this sequence are from the
CC other gene, or which organism the other gene is from. This sequence can
CC be synthesised using the method of the invention, which is for
CC synthesising a composite nucleic acid molecule (NAM) by ligating a first
CC NAM to a second NAM. The methods provide for the generation of larger
CC NAMs from smaller ones without the need to treat the ends in such a way
CC to ensure specific binding of two molecules in correct orientation. They
CC can be used for the site specific ligation of DNA fragments generated by
CC restriction enzyme digestion, DNase digestion, chemical cleavage,
CC enzymatic or chemical synthesis, particularly for ligation of PCR
CC products.

 PT Chimeric kanamycin resistance gene - comprising sequence encoding
 PT adenylyl 4'-nucleotidyl-transferase type Ia and heterologous
 PT promoter and terminator
 PS Example 1: Page 32-33; 51pp; English.
 CC This sequence is encoded by a chimeric gene containing the Staphylococcus
 CC aureus adenylyl 4'-nucleotidyl transferase type Ia (ant(4')-Ia) open
 CC reading frame attached to the E coli aminoglycoside 3'-phosphotransferase
 CC type Ia (aph(3')-Ia) promoter region. The DNA is an example of the
 CC chimeric kanamycin resistance (CKR) gene of the invention, which
 CC comprises a ant(4')-Ia coding sequence, operably linked to a heterologous
 CC promoter and termination sequence. The CKR gene can be used in the
 CC production of protein or antigen delivery vectors, e.g. for therapeutic
 CC or prophylactic treatment, gene therapy or genetic immunisation.
 CC Ant(4')-Ia confers resistance to a much more limited number of clinically
 CC relevant aminoglycosides compared to aph(3')-Ia, and therefore provides
 CC clinical vectors with improved safety.

 PT Determining effect on signalling pathways in live cells from
 PT redistribution of luminophores - specifically fusions of green
 PT fluorescent protein with a signalling component, and new apparatus,
 PT particularly for identifying toxins and potential therapeutic agents
 PS Example 6; Pages 244-245; 326pp; English.
 CC The present sequence represents a green fluorescent protein (GFP)-human
 CC VASP fusion protein. The fusion protein is used in an assay to
 CC exemplify the invention. The specification describes how quantitative
 CC information about the influence of a molecule on a cellular response is
 CC obtained by recording the variation, caused by the molecule, on
 CC mechanically intact living cells, in the spatially distributed light
 CC emitted from a luminophore present in the cells. The variation in light
 CC emission is processed to provide information that correlates spatial
 CC distribution to the degree of the molecule. The method is used to
 CC identify agents that (in)directly affect intracellular signalling,
 CC especially to screen for potential therapeutic agents or toxins, and to
 CC identify new drug targets.

PT Eukaryotic carotenoid biosynthetic enzymes and related genes -
PT useful to control ratio of various carotenoid(s) in host and for
PT production of novel carotenoid pigments
PS Claim 1; Page 33-35; 89pp; English.
CC This protein comprises Arabidopsis thaliana epsilon cyclase, an
CC enzyme responsible for the formation of epsilon end-groups in
CC carotenoids. Its amino acid sequence was deduced from an
CC isolated cDNA clone (see T95371). Expression vector pAREps
CC comprising the epsilon cyclase gene is deposited as ATCC 98005.
CC The claimed eukaryotic carotenoid biosynthetic enzymes
CC epsilon cyclase, beta-carotene hydroxylase and isopenentenyl
CC pyrophosphate isomerase (see W35346-51) are used in methods for
CC augmenting the accumulation of carotenoids and for the production
CC of novel and rare carotenoids in host cells. Methods are also
CC provided for controlling the ratio of various carotenoids in a
CC host, and for screening for eukaryotic genes that encode enzymes
CC of carotenoid biosynthesis and metabolism.

COMMENT This copper protein is one of two enzymes that catalyze the
oxidation of peptidylglycine to the corresponding peptidyl
(2-hydroxyglycine) in the presence of ascorbate; the product is
unstable and dismutates to glyoxylate and the corresponding
desglycine peptide alpha-amide. The presence of such a C-terminal
alpha-amide structure is essential for the biological activity of
many peptide hormones. The other enzyme is peptidyl
alpha-amidating enzyme I.
CLASSIFICATION #superfamily peptidylglycine monooxygenase II;
peptidylglycine monooxygenase I homology

#cross-references GB:V01155; GB:J02478; NID:g15659; PID:g15669
#note         the authors assign the gene 4 protein to a different
              open reading frame; the sequence shown corresponds to
              ORF 9 of the authors; with the exception of the
              initiator Met, the reported composition based on the
              translated sequence agrees with that of the sequence
              shown

GENETICS
#gene         4
#map_position 22-20
#description  early protein gp4 is believed to be a positive regulator of
               late transcription; it may function as a sigma-like
               component of the Bacillus RNA polymerase
CLASSIFICATION #superfamily phage P2A gene 4 protein
KEYWORDS       early protein; sigma factor; transcription
SUMMARY        #length 125 #molecular-weight 15133 #checksum 457

the proline-rich focal adhesion and microfilament-associated protein
VASP";
RL EMBO J. 14:19-27(1995).
RN [2]
RN FUNCTION: ACTIN- AND PROFILIN-BINDING MICROFILAMENT-ASSOCIATED
PROTEIN. MAY ACT IN CONCERT WITH PROFILIN TO CONVEY SIGNAL
TRANSDUCTION TO ACTIN FILAMENT PRODUCTION.
CC -1- SUBUNIT: HOMOTETRAMER.
CC -1- SUBCELLULAR LOCATION: FOCAL ADHESIONS.
CC -1- PTM: MAJOR SUBSTRATE FOR CAMP-DEPENDENT (CAPK) AND CGMP-DEPENDENT
PROTEIN KINASE (CGPK) IN PLATELETS.

PT Recombinant DNA comprising RNA derived sequences - used for
PT protecting organisms, esp. plants from virus infection or for
PT producing protein or RNA
PS Disclosure; fig 4; 30pp; English.
CC The corresp. tumour necrosis virus (TNV) replicase DNA sequence is
CC co-transfected, into a host cell genome, with an expression cass-
CC ette comprising RNA virus derived sequences. Pref. the cassette
CC comprises (a) two 12-1250 bp inverted LTR sequences and, between
CC these, (b) at least one sequence, from an RNA virus dependant on
CC replicase, having cis elements for replication and no coding info.
CC for replicase or viral coat protein. The transformed host is
CC subsequently protected against RNA viruses dependant on the repli-
CC case for replication. By incorporating non-viral sequences the
CC expression cassette can be used to produce, in an inducible- or
CC tissue specific manner, protein(s)/peptide(s) or RNA(s), eg
CC ribozymes, antisense RNAs or double-stranded RNAs.

PT DNA encoding MAP2 kinase enzyme and vectors or host cells - are
PT for assaying cellular factor (e.g. NGF), and drug screening

PS Disclosure; Fig 3B; 9pp; English.
 CC The indicated amino acids are residues most conserved among all
 CC protein kinases. Cells producing the kinase can be used for
 CC assaying cellular factor activity where the activation of the kinase
 CC serves as an indicator of activity. Cpd. detected include those
 CC having nerve growth factor-like activity, insulin-like activity or
 CC neurotrophin mols.
 CC ERK1-3, represented in Q0260-62, have a mol. wt. of 41-48 kD
 CC (SDS-PAGE) and have an N-terminal portion which shows homology with
 CC yeast FUS3 or KRS1 protein kinases.

 DR Bacillus thuringiensis isolates - used for producing pesticidal
 PT toxins and nucleotide sequences for control of lepidopterans and
 PT coleopterans

PS Claim 5; Page 90-92; 139pp; English.
 CC This polypeptide comprises a novel soluble toxin of Bacillus
 CC thuringiensis (B.t.) strain PS196F3 (NRRL B-21872). The toxin
 CC belongs to the novel MIS-6 family of B.t. toxins that have toxicity
 CC against non-mammalian pests. Its amino acid sequence was deduced
 CC from a novel DNA fragment (see V30310) obtained by PCR from
 CC cellular genomic DNA of PS196F3. Disclosed and claimed are novel
 CC B.t. isolates and toxins (see W60218-32) that have activity against
 CC lepidopteran and/or coleopteran pests, isolated genes, probes
 CC and primers (see V30288-321 and T99734-87) useful for production
 CC of the toxins and for the identification and characterisation of
 CC these toxins, and transformed hosts, particularly plant and
 CC bacterial hosts. The invention provides 8 entirely new families of
 CC toxins, including MIS-6, from B.t. isolates. MIS toxins have the
 CC additional ability to form pores in cell membranes, and can be used
 CC to facilitate entry of a second agent into a target cell.

 DR New matrix metalloproteinase(s) and DNA encoding them - also vectors,
 PT recombinant cells and complexes with ligands, useful as proteolytic
 PT agents and for identification of specific inhibitors and activators
 PT Claim 10; Page 31; 85pp; German.
 PS The present sequence is that of human matrix metalloproteinase
 CC MMPm2. The protein has mol. wt. 75813 and comprises a signal
 CC peptide, pro-region, conserved catalytic domain and haemopexin-
 CC homologous sequence, all typical of known metalloproteinases. MMPm2
 CC differs from known metalloproteinases in having a hydrophobic region
 CC near the C-terminus, suggesting that the protein is membrane-bound.
 CC MMP proteins can hydrolyse extracellular matrix proteins and are
 CC involved in certain pathologies. The new MMP will be useful for
 CC detecting MMP inhibitors or activators and to generate diagnostic
 CC antibodies.

PT New isolated Salmonella secreted proteins and related genes - used
PT to develop products for the detection, treatment or prevention of
PT Salmonella infections
PS Claim 15; Fig 25; 95pp; English.
CC Salmonella tyrosine phosphatase (StpA) (W15273) is a Salmonella
CC secreted protein (Ssp) that has enzymatic activity. It catalyses
CC the release of phosphate groups from tyrosine residues in proteins.
CC StpA can be used to deactivate or activate eukaryotic or
CC prokaryotic signal transduction proteins that are regulated by the
CC phosphorylation and dephosphorylation of tyrosine residues, thereby
CC altering intracellular signal transduction. Thus, Stp can be used
CC as a research tool to study and evaluate phosphorylation-regulated
CC signal transduction pathways.

PT New nucleic acid encoding specific protein tyrosine phosphatases -
PT useful for identifying specific modulators for treatment and
PT prevention of cancer and neurodegenerative disease
PS Claim 2; Page 160-164; 193pp; English.
CC The present invention describes isolated, enriched or purified nucleic
CC acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The
CC present sequence represents human ALP. The above proteins, other than
CC ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify
CC substances that modulate their activity (i.e. agonists and antagonists,
CC including NBP) in vivo or in vitro. These substances are used to treat
CC or prevent diseases associated with abnormal signal transduction
CC pathways that involve the proteins, particularly cancer (e.g. leukaemia
CC and lymphoma), while modulators of ALK-7 (which is a type I receptor
CC serine/threonine kinase) are used to promote neuronal survival,
CC particularly for treating Alzheimer's, Parkinson's or Huntington's
CC diseases. Nucleic acid fragments of the polynucleotides encoding the
CC proteins can be used as probes to identify and clone related sequences;
CC to detect protein-encoded RNA; to generate transgenic animals and in
CC gene therapy (optionally after mutation). Ab are used to determine the
CC proteins.

PT DNA and polypeptide(s) from a new type of hepatitis C virus (KHCY)
PT - for diagnosing and vaccinating against KHCY infections
PS Disclosure: Fig 2: 119pp; English.
CC The polypeptide is that encoded by the full cDNA sequence of Korean
CC hepatitis C virus (KHCY) cDNA, KHCY-LBCL. It or its fragments may be
CC used in a specific and accurate method for detecting KHCY antibodies
CC in the serum of hepatitis C patients. Antibodies directed against these
CC polypeptides are useful for the purification of KHCY antigens and for
CC the development of an improved diagnostic to detect KHCY antigens in a
CC sample. The polypeptides may also be used in a vaccine for treatment
CC and prevention of KHCY infection at a dosage of 5-200 ug/peptide.

CC	-!- FUNCTION: MEK5 AND ERK5 INTERACT SPECIFICALLY WITH ONE ANOTHER AND NOT WITH MEK1/ERK1 OR MEK2/ERK2 PATHWAYS.				
CC	-!- ENZYME REGULATION: ACTIVATED BY TYROSINE AND THREONINE PHOSPHORYLATION (BY SIMILARITY).				
CC	-!- TISSUE SPECIFICITY: EXPRESSED IN MANY ADULT TISSUES. ABUNDANT IN HEART, PLACENTA, LUNG, KIDNEY AND SKELETAL MUSCLE. NOT DETECTABLE IN LIVER.				
CC	-!- DOMAIN: THE SECOND PROLINE-RICH REGION MAY INTERACT WITH ACTIN TARGETING THE KINASE TO A SPECIFIC LOCATION IN THE CELL.				
CC	-!- PTM: AUTOPHOSPHORYLATED ON THREONINE AND TYROSINE RESIDUES, WHEN THE C-TERMINAL PART OF THE KINASE, WHICH COULD HAVE A REGULATORY ROLE, IS ABSENT.				
CC	-!- SIMILARITY: BELONGS TO THE CDC2/CDC28 SUBFAMILY OF SER/THR PROTEIN KINASES. STRONGEST SIMILARITY WITH OTHER MAP KINASES.

Statistics: Mean 27.150; Variance 38.018; scale 0.714

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New human CRIPTO gene - used for developing prods. for the study,
PT diagnosis, prognosis and treatment of human cancers.
PS Disclosure; Fig 2; 24pp; English.
CC The sequence given is that of the recombinant E.coli derived
CC CRIPTO protein, produced from CRIPTO cDNA. The availability of
CC this protein make it possible to detect cells expressing the CRIPTO
CC gene. It can be used to develop oligonucleotide probes, antisense
CC oligonucleotides and antibodies for the study, diagnosis, prognosis
CC and treatment of human cancer. The cDNA sequence and the amino acid
CC sequence of the corresponding natural CRIPTO protein (different
CC to the recombinant sequence) are given in the specification but
CC poor print quality prevents their inclusion in this database.

PT New cloned CRIPTO gene - used for diagnosis and prognosis of
PT carcinoma, also antisense sequences for tumour treatment
PS Disclosure; Fig 2; 13pp; English.
CC This protein comprises recombinant human CRIPTO produced in
CC Escherichia coli. Human CRIPTO cDNA (see T88973) was expressed
CC in E. coli inclusion bodies as a 20-22 kDa protein. CRIPTO is
CC a member of the epidermal growth factor family. Elevated levels
CC of CRIPTO mRNA, or of protein translated from it, are diagnostic
CC and prognostic of carcinoma, especially colorectal and breast
CC carcinoma. Recombinant CRIPTO can be expressed in prokaryotic or
CC eukaryotic host cells, and used for the identification and
CC characterisation of specific cell surface receptors, or to raise
CC specific antibodies to assay CRIPTO protein expression in
CC immunosays.

PT New antibody to human CRIPTO-related polypeptide-3 - used for the
PT detection of CRIPTO-related polypeptide-3 which is involved in the
PT regulation of the proliferation, differentiation and transformation
PT of cells
PS Example 2; Columns 17-18; 26pp; English.
CC The present sequence represents a human CRIPTO-related protein CR-1. The
CC specification describes an antibody which has binding affinity to CR-3
CC and not to CR-1. The antibodies can be used for the detection of CR-3.
CC CR-3 is a regulatory molecule involved in regulating the proliferation,
CC differentiation, and transformation of various mesenchymal and epithelial
CC cells. In addition expression of CR-3 may serve as a tumour specific
CC marker that may have applicability in the diagnosis, prognosis and
CC possible treatment of specific types of cancer.

PT New cloned CRIPTO gene - used for diagnosis and prognosis of

PT carcinoma, also antisense sequences for tumour treatment

PS Disclosure: Fig 1A-B; 13pp; English.

CC This protein comprises human CRIPTO, a protein encoded by the novel

CC CRIPTO gene that is associated with cancers such as colorectal

CC cancer and breast carcinoma. Its sequence was deduced from a

CC CRIPTO cDNA clone (see T88973) obtained from human teratocarcinoma

CC cell line NT2D1. It is a member of the epidermal growth factor

CC family. Elevated levels of CRIPTO mRNA, or of protein translated

CC from it, are diagnostic and prognostic of carcinoma, especially

CC colorectal and breast carcinoma. Recombinant CRIPTO can be

CC expressed in prokaryotic or eukaryotic host cells (see W32107), and

CC used for the identification and characterisation of specific cell

CC surface receptors, or to raise specific antibodies to assay CRIPTO

CC protein expression in immunoassays.

PT Packaging material containing polypeptide antagonist of alphav,
PT beta3 integrin - used for inhibition of angiogenesis, and for
PT treating tumours, inflammation, eye diseases etc.
PS Claim 2; Page 153; 234pp; English.

```

CC This polypeptide comprises amino acid residues 439-512 of human
CC mature matrix metalloproteinase 2 (hMMP-2). It can be produced
CC by recombinant methods such as PCR amplification of hMMP-2 coding
CC sequence and cloning into e.g. pEX-3X vector for expression in
CC E. coli as a fusion protein with glutathione-S-transferase. The
CC invention relates to the discovery that angiogenesis is mediated by
CC the specific vitronectin receptor alpha-v beta-3, and that
CC inhibition of alpha-v beta-3 function inhibits angiogenesis.
CC Claimed antagonists of alpha-v beta-3 comprise C-terminal fragments
CC (see W41083-94) of human or chicken MMP-2, fusion polypeptides,
CC cyclic or linear polypeptides (see also W41098-110), derivatised
CC polypeptides, a monoclonal antibody or organic mimetic compound.
CC The antagonists are used to inhibit angiogenesis in: inflamed
CC tissue for treatment of arthritis or rheumatoid arthritis; solid
CC tumours or metastases, particularly to induce regression or to
CC inhibit growth of tumours; and in ocular disorders such as diabetic
CC retinopathy or macular degeneration (all claimed). They can also
CC be used to treat restenosis caused by migration of smooth muscle
CC cells following angioplasty and to reduce blood supply to selected
CC tissues (Claimed). The new antagonists are highly selective for
CC angiogenesis. Only new blood vessels express alpha-v beta-3, so
CC mature vessels are unaffected, and the antagonists should be of low
CC toxicity.

PT Packaging material containing polypeptide antagonist of alphav,
PT beta5 integrin - used for inhibition of angiogenesis, and for
PT treating tumours, inflammation, eye diseases etc.
PS Claim 2; Page -: 117pp; English.
CC Peptides W41228-33 are derived from the mature protein of human matrix
CC metalloproteinase-2 (MMP-2) (W41226). The present peptide is derived
CC from amino acids 439-512. The peptides are able to act as alpha-v-beta-5
CC antagonists. Alpha-v-beta-5 is a vitronectin receptor. Inhibitors of
CC alpha-v-beta-5 can inhibit angiogenesis. The specification describes a
CC novel labelled package that contains an inhibitor of angiogenesis i.e. an
CC alpha-v-beta-5 antagonising polypeptide that binds to integrin
CC alpha-v-beta-5 and includes a part of the C-terminal domain of MMP-2.
CC The antagonists are used to inhibit angiogenesis in inflamed tissue, in
CC solid tumours or metastases, and in a wide range of ocular disorders
CC (e.g. diabetic or other forms of retinopathy, neovascular glaucoma, or
CC corneal transplants). They are particularly used to induce regression or
CC to inhibit growth of tumours. The alpha-v-beta-5 antagonists can also be
CC used to treat restenosis caused by migration of smooth muscle cells
CC following angioplasty and to reduce blood supply to selected tissues.
CC The antagonists particularly inhibit neovascularisation where this is
CC induced by cytokines, e.g. transforming growth factor alpha, epidermal

CC growth factor or especially vascular endothelial growth factor.
CC note: this sequence does not appear in the specification; it was created
CC using information provided.

DR WPI: 98-032334/03.
PT Packaging material containing polypeptide antagonist of alphav,
PT betag integrin - used for inhibition of angiogenesis, and for
PT treating tumours, inflammation, eye diseases etc.
PS Claim 2: Page 154: 234pp: English.
CC This polypeptide comprises amino acid residues 439-546 of human
CC mature matrix metalloproteinase 2 (hMMP-2). It can be produced
CC by recombinant methods such as PCR amplification of hMMP-2 coding
CC sequence and cloning into e.g. pGEX-3X vector for expression in
CC E. coli as a fusion protein with glutathione-S-transferase. The
CC invention relates to the discovery that angiogenesis is mediated by
CC the specific vitronectin receptor alpha-v beta-3, and that
CC inhibition of alpha-v beta-3 function inhibits angiogenesis.
CC Claimed antagonists of alpha-v beta-3 comprise C-terminal fragments
CC (see W41083-94) of human or chicken MMP-2, fusion polypeptides,
CC cyclic or linear polypeptides (see also W41098-110), derivatised
CC polypeptides, a monoclonal antibody or organic mimetic compound.
CC The antagonists are used to inhibit angiogenesis in: inflamed
CC tissue for treatment of arthritis or rheumatoid arthritis; solid
CC tumours or metastases, particularly to induce regression or to
CC inhibit growth of tumours; and in ocular disorders such as diabetic
CC retinopathy or macular degeneration (all claimed). They can also
CC be used to treat restenosis caused by migration of smooth muscle
CC cells following angioplasty and to reduce blood supply to selected
CC tissues (claimed). The new antagonists are highly selective for
CC angiogenesis. Only new blood vessels express alpha-v beta-3, so
CC mature vessels are unaffected, and the antagonists should be of low
CC toxicity.

PT Retroviral protease and polymerase genes - useful to develop prods.
PT for diagnosis and treatment of autoimmune diseases, e.g. Sjogren's
PT syndrome.

PS Claim 1; Fig 2; 54pp; English.
CC This reverse transcriptase is encoded by a novel human exogenous
CC retroviral cDNA clone designated JC96. JC96 was isolated using degenerate
CC primers based on Sjo-1 (see W04553). A 136 bp sequence encoding Sjo-1 was
CC isolated by RT-PCR amplification of total RNA from a Sjogren's syndrome
CC salivary gland lip biopsy. The peptide showed close homology with D and
CC B-type retroviral sequences. Clone JC96 also encodes a protease. The
CC genes and proteins are useful for diagnosis of retrovirus-associated
CC autoimmune diseases, e.g. Sjogren's syndrome.

Statistics: Mean 23.018; Variance 25.710; scale 0.895

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Herpes simplex virus type-2 sequences - useful in, e.g. prevention
PT and treatment of infection or inducing immunological response in
PT mammal
PS Claim 10; Page 105; 748pp; English.
CC This sequence represents a Herpes simplex virus type-2 (HSV-2) protein
CC sequence of the invention. This sequence was isolated from a HSV-2 strain
CC SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 12.
CC The proteins can be used for the treatment or prevention of disease, to
CC induce an immunological response in a mammal or to identify inhibitors,
CC activators or novel antivirals. Antagonists of the proteins can be used
CC to inhibit a viral polypeptide. The DNA sequence or a vector containing
CC it can also be used to induce an immunological response in a mammal.

PT Isolated cephalosporin esterase gene - obtained from Rhodospiridium
PT toruloides, used to obtain products which can be used for hydrolysis
PT of cephalosporins
PS Claim 13; Fig 5; 38pp; English.
CC This protein comprises Rhodospiridium toruloides ATCC 10657
CC cephalosporium esterase, an enzyme that catalyses the hydrolysis of
CC the 3' acetyl groups of cephalosporins. The enzyme, especially the
CC mature polypeptide, can be purified from cultures of R. toruloides
CC or expressed in claimed host cells (preferably Escherichia coli, R.
CC toruloides, Cephalosporium acremonium or Penicillium chrysogenum)
CC transformed with a vector comprising cephalosporin esterase cDNA or
CC genomic DNA (see V21460-61). The isolated polypeptides, even if
CC catalytically inactive, can also be used for the production of
CC antibodies for use in detection and purification.

 PT New mammalian cytokinin-like receptor Zcytor5 - useful for, e.g.
 PT down-regulating Zcytor5 natural ligands or detecting cardiostrophin-1
 PT in blood
 PS Claim 1: Page 102; 55pp; English.
 CC The present sequence represents a Zcytor5 epitope-bearing region. Zcytor5
 CC is a cytokinin-like receptor. Soluble Zcytor5 may be administered to
 CC down-regulate the effects of a growth and/or maintenance factor in
 CC thyroid, heart, and skeletal muscle for example to lessen the effect
 CC of cardiostrophin-1 on cardiac pathologies, so preventing heart
 CC enlargement. Zcytor5 could be used to detect cardiostrophin-1 in the
 CC blood, and to discover other possible Zcytor5 ligands. A probe
 CC comprising Zcytor5 DNA or RNA can be used to determine the presence
 CC and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the
 CC anti-idiotypic antibody could be used to purify Zcytor5 and
 CC therapeutically to modify Zcytor5 ligand effects.

 PT New isolated haemopoietin receptor - used for developing products
 PT for modulating proliferation, differentiation and survival of cells,
 PT e.g. neuronal cells
 PS Claim 17; Page 93-95; 182pp; English.
 CC The protein sequence was generated by a 5N RACE of brain cDNA using
 CC NR6 specific primers. NR6 is a novel Haemopoietin receptor (HR).
 CC Interaction between the novel HR and a ligand facilitates proliferation,
 CC differentiation and survival of a wide variety of cells. The HR and it's
 CC derivatives can be used for modulating the activity of the receptors e.g.
 CC to regulate development, maintenance or regeneration in an array of
 CC different cells and tissues in vitro and in vivo. They can be present in
 CC therapeutics used for modulating neuronal proliferation, differentiation
 CC and survival. The products can also be used for detection and diagnosis,
 CC e.g. for cancers or predisposition to cancers, or for drug screening.

 PT New mammalian cytokinin-like receptor Zcytor5 - useful for, e.g.
 PT down-regulating Zcytor5 natural ligands or detecting cardiostrophin-1
 PT in blood
 PS Claim 1: Page 86; 55pp; English.
 CC The present sequence represents a Zcytor5 variant protein. Zcytor5
 CC is a cytokinin-like receptor. Soluble Zcytor5 may be administered to
 CC down-regulate the effects of a growth and/or maintenance factor in
 CC thyroid, heart, and skeletal muscle for example to lessen the effect
 CC of cardiostrophin-1 on cardiac pathologies, so preventing heart
 CC enlargement. Zcytor5 could be used to detect cardiostrophin-1 in the
 CC blood, and to discover other possible Zcytor5 ligands. A probe
 CC comprising Zcytor5 DNA or RNA can be used to determine the presence
 CC and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the
 CC anti-idiotypic antibody could be used to purify Zcytor5 and
 CC therapeutically to modify Zcytor5 ligand effects.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Molecular chimera for use in enzyme gene therapy - is activated in
PT a target cell to express a secretable enzyme which cleaves a produg
PT outside the cell into a cytotoxic or cytostatic agent
PS Example 2; Page 43-45; 73pp; English.
CC The amino acid sequence (R97618) of human pancreatic
CC carboxypeptidase Al (HCPAL) was deduced from a cDNA clone (T29217)
CC isolated from a human pancreas cDNA library. Mutagenesis of the cDNA
CC provides clones coding for mutant enzymes, pref. 268G-HCPAL. A
CC molecular chimera can be produced that comprises a transcriptional
CC regulatory sequence activated in a targeted mammalian cell, e.g.
CC tumour cells, linked to a sequence coding for a signal peptide and
CC 268G-HCPAL. Upon expression, 268G-HCPAL catalyzes extracellular
CC conversion of a produg into a cytotoxic or cytostatic agent. Gene
CC or virus directed enzyme produg therapy is obtd.

PT New prodrugs, and enzyme-targeting molecule conjugates - useful in
PT antibody-directed enzyme prodrug therapy of e.g. viral infections
PS Claim 34; Page -; 247pp; English.
CC A new conjugate for anti-tumour therapy comprises a targeting moiety
CC linked to a mutated enzyme which can transform an anti-neoplastic
CC prodrug. The system is based on antibody directed enzyme prodrug therapy
CC (ADEPT) using a non-naturally occurring mutant form of a host enzyme.
CC The enzyme precursor is refractory to endogenous catalysis by the wild-
CC type form of the enzyme. The mutated enzyme has markedly reduced
CC immunogenicity compared to non-host enzymes. Also because the mutated
CC enzyme is non-naturally occurring, non-selective triggering of prodrug
CC activation by natural flora or host enzymes is reduced. The enzyme is
CC pref. a hydrolase, a transferase, an oxido-reductase, an isomerase, a
CC lyase or a ligase, esp. human pancreatic carboxypeptidase A1 or 2 (HCPAL
CC or 2) possessing amino acid substitutions at one or more of residues 203,
CC 210, 242, 244, 250, 253, 255, 267, 268, 269 and/or 305, all other
CC residues being wild-type. The present sequence is a preferred variant of
CC HCPAL.

PT Use of neutralising antibody to human interleukin-5 - that does not
PT block binding to receptor alpha chain, to treat e.g. asthma,
PT allergic rhinitis or atopic dermatitis
```

PS Example 4; Fig 7; 116pp; English.
CC This peptide comprises complementarity determining region 2 (CDR2)
CC of the light chain variable region of anti-human interleukin-5
CC (hIL-5) murine monoclonal antibodies (Mab) 2F2 and 2E3 (see W42454
CC and W42456). The invention provides antibodies, especially altered,
CC chimeric and humanised (see also W42465-66 and W42471-72),
CC which are characterised by hIL-5 specificity, neutralising activity
CC and affinity for hIL-5. The antibodies are prepared by conventional
CC hybridoma techniques, phage display combinatorial libraries,
CC immunoglobulin chain shuffling and humanisation techniques, e.g.
CC utilising the CDRs of mouse and rat anti-hIL-5 MAb. The products
CC are useful for treating hIL-5-mediated disorders such as asthma,
CC allergic rhinitis and atopic dermatitis, and can also be used in
CC the diagnosis of such conditions by measurement (e.g. by ELISA) of
CC endogenous hIL-5 levels.

PT New monoclonal antibody to human interleukin-5 - used to produce
PT products for the treatment and diagnosis of conditions associated
PT with excess eosinophil prodn., e.g. asthma etc.
PS Claim 12; Page 50; 120pp; English.
CC The complementarity determining regions (CDRs) for the VH region
CC of monoclonal antibody (Mab) 2B6 (see also R98478) are given in
CC R98480-82. Mab 2F2 VH (see also R98496), CDR1 and CDR2 are identical to
CC For Mab 2E3 VH (see also R98496), CDR1 and CDR2 are identical to
CC those of 2B6 and 2F2, but CDR3 has a different amino acid sequence
CC (R98483). The CDRs for the 2B6 VL region (see also R98479) are
CC given in R98484-86. For 2F2 VL (see also R98495) and 2E3 VL
CC (see also R98497), CDR1 and CDR2 are identical to CDR1 and CDR2
CC of 2B6, but CDR3 is different (R98487). 2B6, 2F2 and 2E3 are
CC murine anti-human interleukin-5 MABs. The CDRs can be used
CC in the construction of humanised antibodies (see also R98488-89)
CC and R98492-93) useful in the treatment of IL-5-mediated
CC conditions, e.g. asthma.

Page 4

PT Use of neutralising antibody to human interleukin-5 - that does not
PT block binding to receptor alpha chain, to treat e.g. asthma,
PS allergic rhinitis or atopic dermatitis
PS Example 4; Fig 4; 116pp; English.
CC This polypeptide comprises the light chain variable region of
CC anti-human interleukin-5 (hIL-5) murine monoclonal antibody (MAB)
CC 2F2, which is produced by hybridoma cell line SK119-2F2.37.80.12
CC (ATCC HB 11781). In a claimed method for treating conditions
CC associated with excess eosinophil production, the improvement
CC comprises administering a neutralising MAB for hIL-5 which does not
CC block binding of hIL-5 to the alpha-chain of the hIL-5 receptor.
CC Also claimed are methods of detecting the absence/presence of
CC hIL-5 soluble receptor alpha-chain (Ralpha)/hIL-5 complexes,
CC and of screening for compounds that antagonise the binding of
CC Ralpha/hIL-5 or Ralpha/hIL-5/MAB complex with the hIL-5 receptor
CC beta-chain. Also disclosed are novel neutralising antibodies,
CC especially altered, chimeric or humanised antibodies (see
CC W42465-66, W42471-72), as well as vectors and transformed cells
CC for their expression. These products are useful for treating
CC hIL-5-mediated disorders such as asthma, allergic rhinitis and
CC atopic dermatitis, and can also be used in the diagnosis of such
CC conditions by measurement (e.g. by ELISA) of endogenous hIL-5
CC levels.

PT A guinea pig MBP gene - contains DNA base sequence coding MBP
PT gene having 1 of 2 specified aminoacid sequences
PS Disclosure; Page 15; 20pp; Japanese.
CC The sequence shows the protein sequence of the guinea pig major basic
CC protein (MBP)-1. The sequence was obt'd. by first isolating MBP-1
CC and MBP-2 from the abdominal transudate of male guinea pigs treated
CC with polymyxin and ascaris extract. MBP-1 and MBP-2 were used to
CC design probes for screening of a guinea pig eosinophil cDNA library.
CC The cDNA encoding the MBPs was used to transform suitable host
CC cells which may then be cultured to obtain large amts. of MBP.
CC The MBPs may be used for the confirmation of the effect of an anti-
CC asthma drug. See also R29717.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 18:52:54 1999; MasPar time 3.38 Seconds

Tabular output not generated.
75.217 Million cell updates/sec

Title: >US-09-041-236-2
Description: (412-420) from US09041236.pap (23 of 45)
Perfect Score: 63
Sequence: 1 EQHSPAFN 9

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 22.870; Variance 26.251; scale 0.871

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

DR New Plasmodium falciparum erythrocyte membrane proteins - used to
PT develop products for the diagnosis, treatment or prevention of
PT malaria parasite infections
PS Claim 1; Figure 12; 149pp; English.
CC A polypeptide comprising a Plasmodium falciparum (Pf) erythrocyte
CC membrane protein 1 (PfEMP1), or active fragments or analogues of that
CC protein can be used in the treatment or prevention of symptoms of a
CC malaria parasite infection. The polypeptides can inhibit, block or
CC reverse the sequestration of erythrocytes in patients suffering from
CC malaria. Nucleic acids derived from the PfEMP1 gene can be used as
CC probes and primers to identify a Plasmodium falciparum parasite, the
CC primers used to generate characteristic amplification patterns from
CC different P. falciparum strains. Antibodies specifically
CC immunoreactive with the PfEMP1 polypeptide or its fragments may be
CC used in diagnosis of malaria infection. This is a truncated PfEMP1

CC protein of the MC type of Plasmodium falciparum. The full length
CC PfEMP1 protein is given in W00384.

PT Identifying cell signalling and growth regulatory polypeptides by

PT reaction with multivalent recognition complex - polypeptides are

PT useful in targetted drug selection

PS Claim 48; Fig 17; 220pp; English.

CC The present sequence represents a novel protein WWP1. The WWP1 gene was

CC identified and isolated from human bone marrow and brain cDNA libraries,

CC using peptides W38103-05. These peptide recognition units are based on

CC the sequences of WW domain binding domains of the YAP WW domain binding

CC proteins WBP-1 and WBP-2. The WW domain is a small functional domain

CC found in a large number of proteins from a variety of species including

CC humans, nematodes and yeast. Its name is derived from the observation

CC that two tryptophan residues, one in the amino terminal portion of the

CC WW domain and one in the carboxyl terminal portion, are conserved. Most

CC proteins containing WW domains have a function involving cell signalling

CC and growth regulation or the organisation of the cytoskeleton.

CC Polypeptides containing a WW domain are identified by treating a

CC multivalent recognition unit complex that has selective binding affinity

CC for a WW domain, with many polypeptides and identifying those with a

CC selective affinity for the complex. Proteins containing WW domains are

CC used for targeted drug screening, i.e. to identify potential modulators

CC of specific WW domain interactions. The valency of the recognition unit

CC is important in determining specificity of interaction with WW domains.

CC In multivalent form specificity is relaxed, but not lost, so proteins

CC containing WW domains similar, but not identical, to the sequence of the

CC peptides' target WW can be detected, including new polypeptides.

 PT Herpes simplex virus type-2 sequences - useful in, e.g. prevention
 PT and treatment of infection or inducing immunological response in
 PT mammal
 PS Claim 10; Page 122; 748pp; English.
 CC This sequence represents a Herpes simplex virus type-2 (HSV-2) protein
 CC sequence of the invention. This sequence was isolated from a HSV-2 strain
 CC SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 15.
 CC The proteins can be used for the treatment or prevention of disease, to
 CC induce an immunological response in a mammal or to identify inhibitors,
 CC activators or novel antivirals. Antagonists of the proteins can be used
 CC to inhibit a viral polypeptide. The DNA sequence or a vector containing
 CC it can also be used to induce an immunological response in a mammal.

 PT New malaria vaccines - contains cysteine-rich DBL family protein
 PT binding domains homologous domains of the Duffy and sialic acid
 PT binding proteins
 PS Claim 8; Page 70-74; 96pp; English.
 CC This sequence represents var-1 of Plasmodium. Var-1 belongs to
 CC the Duffy binding like (DBL) family of genes which have homology to the
 CC Duffy antigen binding protein (DABP) and sialic acid binding protein
 CC (SABP) conserved regions (see T72889 and T72888 respectively). The var
 CC family of genes modulate cytoadherence and antigenic variation of
 CC Plasmodium infected erythrocytes. SABP and the Duffy antigen binding
 CC protein (DABP) are soluble proteins that appear in the culture
 CC supernatant after infected erythrocytes release merozoites. DABP and SABP
 CC mediate the binding of merozoites and schizonts to the erythrocyte
 CC surface. These proteins are necessary for erythrocyte invasion by the
 CC parasite. This sequence can be used in the compositions of the invention.
 CC The compositions are for the treatment and prevention of malaria, and
 CC comprise either a nucleotide sequence or encoded polypeptide of the
 CC var-1, var-2, var-3 or var-7 genes of the DBL gene family, a family of
 CC genes having homology with conserved regions of DABP and SABP. The
 CC compositions are used for the treatment and prevention of malaria. They
 CC are also used in the preparation of vaccines for inducing a protective

CC immune response in a mammal to Plasmodium merozoites (especially
 CC Plasmodium falciparum or Plasmodium vivax).

 PT New erythrocyte binding domain polypeptide(s) - isolated from
 PT Plasmodium binding proteins, used in diagnosis, treatment and
 PT prevention of malaria
 PS Disclosure; Page 61-65; 81pp; English.
 CC Erythrocyte binding ligand (EBL) family genes were cloned from
 CC P. falciparum chromosome 7 subsegment libraries constructed during
 CC genetic studies of the chloroquine resistance locus. The 4 genes,
 CC EBL-e1 (Q83526), E3la (Q83527), EBL-e2 (Q83528) and Proj3 (Q83529),
 CC encode the proteins given in R70233-36, respectively. The binding
 CC domains of such proteins can be expressed e.g. in E. coli, yeast,
 CC mammalian, insect, and in vaccinia virus and adenovirus-infected
 CC cells, and provide protection against P. falciparum.

PT - uncluf as therapeutic and diagnostic agents e.g. for assaying
PT PDGF activity in sample

PS Disclosure; Page 75; 109pp; English.
CC The sequence given is one allele of type B human platelet-derived
CC growth factor (PDGF) receptor (PDGF-R). This receptor is typically
CC found on cells of mesenchymal origin. It acts while in the form of
CC two transmembrane glycoproteins, each of which is about 180 kD.
CC This receptor has three major regions. The first is a transmembrane
CC region, which spans the membrane once, separating the regions of the
CC receptor exterior to the cell from those interior to the cell. The
CC second region is an extracellular region which contains the domains
CC which bind the PDGF. The third region is an intracellular region
CC which possesses a tyrosine kinase activity. This tyrosine kinase
CC domain is notable in having an insert of approx. 100 amino acids,
CC as compared with most other receptor tyrosine kinase domains which
CC are contiguous or have shorter insert sequences. Fragments of this
CC sequence between 8 and 400 amino acids comprising one or more PDGF
CC ligand binding region from the extracellular domain may be used to
CC bind a PDGF ligand.

CC -!- FUNCTION: INVOLVED IN NUCLEOTIDE EXCISION REPAIR OF DNA DAMAGED
WITH UV LIGHT, BULKY ADDUCTS, OR CROSS-LINKING AGENTS. ALONG WITH
RAD10 FORMS AN ENDONUCLEASE THAT SPECIFICALLY DEGRADES SINGLE-
STRANDED DNA.
CC -!- SUBUNIT: HETERODIMER COMPOSED OF RAD1 AND RAD10.
CC -!- SUBCELLULAR LOCATION: NUCLEAR.
CC -!- SIMILARITY: BELONGS TO THE XPF/ERCC4/RAD1/RAD16 FAMILY.
CC -!- CAUTION: REF 2 SEQUENCE DIFFERS FROM THAT SHOWN IN THE C-TERMINUS
DUE TO FRAMESHIFTS.

Title: >US-09-041-236-2
Description: (475-482) from US09041236.pap (25 of 45)
Perfect Score: 79
Sequence: 1 RDPYCGWD 8

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 24.241; Variance 31.212; scale 0.777

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 20.255; Variance 62.606; scale 0.324

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New isolated GABA receptor subunit, epsilon - used to develop
PT products for the screening and design of drugs, e.g. for modulating
PT appetite behaviours, hormonal interactions and cognition
PS Claim 15; Fig 1; 37pp; English.
CC This polypeptide comprises a novel class of subunit, classified as
CC as epsilon, within the human GABA receptor gene family. Its amino
CC acid sequence was deduced from a cDNA clone (see V36319) isolated
CC from a human brain cDNA library. A stably co-transfected eukaryotic
CC cell line capable of expressing the GABA epsilon receptor subunit,
CC at least one alpha receptor subunit and at least one beta receptor
CC subunit is claimed. A recombinant expression vector, and protein
CC and membrane preparations of the GABA receptor obtained from the
CC co-transfected cells are also claimed. The new GABA-A receptor
CC epsilon subunit and products can be used in the screening and
CC design of drugs which act upon the GABA receptor. The ligands or
CC drug candidates identified may be used as therapeutic agents, e.g.
CC for the modulation of appetite behaviours, hormonal interactions
CC and cognition. They can also be used for the study of structure,
CC pharmacology and function of the various GABA receptor subtypes.

PT New human calcium sensor protein and vector encoding inhibitor of gp
PT 330 mediated transport of amyloid beta protein - useful to treat
PT membranous glomerulonephritis and central nervous system disorders
PS Claim 7; Page 145-163; 240pp; English.
CC This sequence comprises a human kidney calcium sensor protein
CC (hCSP), deduced from the nucleotide sequence (see V05996) of a
CC clone obtained by PCR amplification. Full-length sequences for
CC human placenta (see W43312) and parathyroid (see W43314) are also
CC claimed. hCSP is considered to be the human homologue of rat
CC Heymann nephritis antigen gp330 on the basis of sequence
CC similarity. It is proposed that the calcium sensor is a
CC universal sensor for recognition of variation in extracellular
CC calcium, and plays a key role in calcium regulation via different
CC organ systems. hCSP belongs to the low density lipoprotein
CC superfamily of glycoproteins. It can be expressed in a claimed
CC host cell using a vector comprising hCSP cDNA. Also claimed are a
CC method of using hCSP to treat human membranous glomerulonephritis,
CC and the use of hCSP to screen for agonists and antagonists of hCSP.
CC Such (ant)agonists are useful in the treatment of conditions
CC associated with perturbations in parathyroid hormone levels,
CC vitamin D3 production, oestrogen levels, osteoclast or osteoblast
CC activity, calcium secretion and calcium ion homeostasis, e.g.
CC hyperthyroidism and osteoporosis.

PT Isolated human calcium sensor protein - useful develop prods. for
PT diagnosis and treatment of conditions, such as membranous
PT glomerulonephritis
PS Claim 7; Page 78-96; 236pp; English.
CC A 500 kDa human calcium sensor protein (CSP) (R97208) was identified
CC as the product of cDNA clone (T28773) obt'd. from human kidney and
CC placental cDNA libraries. Full-length sequences of placental, kidney
CC and parathyroid CSP (see also R97209-11) were also obt'd. They show
CC homology to LDL receptor proteins. CSP can be isolated from
CC parathyroid, placental or kidney tubule cells or obt'd. by expression of
CC encoding sequences in transformed host cells. It is useful for
CC identifying potential (ant)agonists and in the diagnosis and treatment
CC of e.g. membranous glomerulonephritis, and also in the treatment of
CC wounds and ulcers.

 PS Claim 7; Page 177-195; 240pp; English.
 CC This sequence comprises a human parathyroid calcium sensor protein
 CC (hcsp), deduced from the nucleotide sequence (see V05996) of a
 CC clone obtained by PCR amplification. Full-length sequences for
 CC human placenta (see W43312) and kidney (see W43313) are also
 CC claimed. hcsp is considered to be the human homologue of rat
 CC Heymann nephritis antigen gp330 on the basis of sequence
 CC similarity. It is proposed that the calcium sensor is a
 CC universal sensor for recognition of variation in extracellular
 CC calcium, and plays a key role in calcium regulation via different
 CC organ systems. hcsp belongs to the low density lipoprotein
 CC superfamily of glycoproteins. It can be expressed in a claimed
 CC host cell using a vector comprising hcsp cDNA. Also claimed are a
 CC method of using hcsp to treat human membranous glomerulonephritis,
 CC and the use of hcsp to screen for agonists and antagonists of hcsp.
 CC Such (ant)agonists are useful in the treatment of conditions
 CC associated with perturbations in parathyroid hormone levels,
 CC vitamin D3 production, oestrogen levels, osteoclast or osteoblast
 CC activity, calcium secretion and calcium ion homeostasis, e.g.
 CC hyperthyroidism and osteoporosis.

 PT Modified hygromycin B resistance conferring gene - useful for
 PT cloning of promoters, construction of gene fusions etc.
 PS Disclosure; Page 28; 39pp; English.
 CC The DNA of the invention (N50387) is useful for cloning, isolation
 CC and characterisation of promoters and for the construction of gene
 CC fusions, acting as dominant markers in host cells. The gene confers
 CC hygromycin B resistance. A DNA segment conferring such resistance is
 CC described in GB2100738. With the vectors and transformants, cloning
 CC of genes directly or indirectly encoding specific functional
 CC polypeptides or fused gene prods. is possible. The DNA is esp. the
 CC 1.3bp Bam HI-Bgl II restriction fragment of plasmid pIT 123. The
 CC vector may be plasmid pIT 123,125,144,208,212,213,215,217 or 219 or
 CC pKC 307 or 308. The transformant is esp. Escherichia coli or
 CC Saccharomyces cerevisiae.

 PT New recombinant DNA cloning vectors - conferring hygromycin B and
 PT G418 resistance to eukaryotic and prokaryotic host cells
 PS Disclosure; Page 5-12; 39pp; English.
 CC Plasmid pKC203 is approximately 15kb in size and can be isolated
 CC readily from E. coli JR225 by conventional procedures. Strain E.
 CC coli JR225 is deposited under ATCC 31912. The 7.5kb BglII

```

CC restriction fragment of pKC203 comprises the structural genes and
CC control elements for expression of resistance to antibiotics
CC hygromycin B and G418. The hygromycin B and G418 resistance genes
CC and control elements in illustrative plasmids pKC214, pKC215, pGD1,
CC pGD2, pGD3 and pGD4, comprise the 7.5 kb BglII fragment of plasmid
CC pKC203. This BglII fragment has been further localized to the
CC 2.5kb Sall/BglII fragment. A restriction map of the 2.5kb
CC Sall/BglII fragment is presented as part of plasmid pKC222.
CC Plasmid pKC222 is useful for isolating the individual genes and
CC control elements that confer resistance to particular antibiotics.
CC For example, the 1.5kb BglII/SacI fragment of plasmid pKC222
CC comprises the hygromycin B resistance gene and control element.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 18:59:16 1999; MasPar time 3.67 Seconds

Tabular output not generated. 123.145 Million cell updates/sec

Title: >US-09-041-236-2
Description: (480-495) from US09041236.pep (26 of 45)
Perfect Score: 124
Sequence: 1 GWDGRCISYSSRS 16

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 27.660; Variance 34.099; scale 0.811

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New isolated gida2 polypeptide from Staphylococcus aureus - used to
PT diagnose, treat and prevent bacterial infections e.g. S. aureus and
PT H. pylori, related cancers, ulcers and gastritis and to prevent
PT adhesion of bacteria to matrix proteins
PS Claim 1; Page 6; 41pp; English.
CC The present sequence represents a gida2 protein fragment of
CC Staphylococcus aureus WCUH29. The gida2 proteins and nucleic acids
CC are used to treat conditions requiring increased activity or expression
CC of gida2, while conditions (e.g. bacterial infections) requiring
CC inhibition of such activity or expression are treated by administering
CC an antagonist, inhibitory nucleic acid or competitive polypeptide.
CC Infection by S. aureus is treated, but also Helicobacter pylori
CC infections and related cancers, ulcers and gastritis. These antibacterial
CC agents may also be used to treat in-dwelling devices to prevent infection
CC or generally as wound treatments to prevent adhesion of bacteria to
CC matrix proteins.

PT Hepatitis C virus poly:nucleic acid unique to unidentified sub:stype

- used to develop probes and primers for new sub:types and vaccines
to prevent and treat infection
Claim 25; Fig 3: 150pp; English.
The sequences R96526-R96578 represent novel sequences isolated from
hepatitis C virus subtypes different from subtypes 1a-c, 2a-d, 3a-f,
4a-j, 5a and 6a. They esp. from the novel subtypes 1d-f, 2e-i, 2k, 2l,
3g, 4k-m, 7a-c or types 9, 10 or 11. The sequences corresp. to the 5',
untranslated region (UR), the Core/E1, NS4 or NS5B regions of the genome.
This sequence represents amino acids 2645-2757 from the HCV types 9a and
7a isolates FR1.
The new HCV types were isolated from patients with chronic HCV from the
Benelux countries, France, Cameroon and Vietnam, because of their
aberrant reactivities. The RNA was extracted, cDNA synthesised and PCR
amplified, cloned and genotyped. The 5'UR, Core/E1 and NS5B regions were
sequenced either directly or partially and used to classify the new
viruses into (sub)types based on comparison with known sequences.
The sequences were used to generate the peptides R96424-R96524. The
sequences can also be used to synthesise probes and primers for the
detection of HCV in a sample. The polypeptides can be used to detect
anti-HCV antibodies, for HCV typing or to prevent HCV infections.

 PT Progesterin-regulated gene - indicative of a subject's progesterin
 PT responsiveness, also for treatment of metabolic disease or
 PT hyperproliferation etc
 PS Example; Fig 2B; 50pp; English.
 CC The polypeptide (W15747) encoded by the novel human progesterin-
 CC regulated gene PRG1 (T60548) appears to have a novel enzymatic
 CC activity that may be useful as a readily detectable marker for
 CC progesterin responsiveness. The 520 amino acid protein shows high
 CC similarity to human liver PFK/FBP and has several consensus
 CC phosphorylation sites. Regulating the enzymatic activity of
 CC PRG1 by using (ant)agonists, ribozymes or by gene therapy can
 CC be used to treat hyperproliferation, e.g. cancer and skin
 CC diseases. Anti-PRG1 antibodies can be used to assess a subject's
 CC responsiveness to progesterin; high levels of PRG1 indicate that a
 CC breast tumour will be treatable with progesterin. PRG1 is probably
 CC involved in glycolytic, gluconeogenic and lipogenic pathways, and
 CC may be useful in the treatment of diabetes and other disorders of
 CC energy metabolism, and to control reproductive function.

PT New immunogenic fragments of Leishmania antigens and related nucleic
PT acid, vectors and host cells - are useful for diagnosis, prevention
PT and treatment of leishmaniasis, also to induce production of
PT interleukin-12 generally.
PS Claim 13; Page 107-108; 194pp; English.
CC This sequence represents a Leishmania antigen (LAG) of the invention,
CC designated MAPS-1A. Compositions and vaccines containing the protein are
CC used to generate a protective or therapeutic immune response against the
CC Leishmania species donovani, chagasi, infantum, major, amazonensis,
CC braziliensis, panamensis, tropica or guayanensis. They can also be used
CC to detect infection (in a skin test). The compositions induce a humoral
CC and/or cellular response, specifically of Th1 type, particularly
CC including induction of interleukin-12 (IL-12) production. They may thus
CC be used more generally to treat any condition (e.g. bacterial, viral or
CC protozoal infection, or cancer) which responds to IL-12.

PT New agents for inducing apoptosis in cells - which are able to
PT modulate a biochemical pathway in which prods. of opioid peptide
PT precursor genes participate.
PS Claim 6; Fig 4; 64pp; English.
CC This sequence represents proenkephalin (PE). Epitopes within this
CC sequence are recognised by anti-PE antibodies (see R91363-R91366,
CC R91368-R19373 and R95283-R95286 for partial antibody sequences). The PE
CC antibodies are used in an agent for inducing apoptosis in cells. The
CC agents preferably neutralise this sequence or its proteolytic
CC derivatives, increase the level of, activate or mimic nuclear PE, and act
CC as an antagonist to receptors related or identical to the delta and kappa
CC opioid receptors. The agent is preferably a neutralising monoclonal
CC antibody (such as those represented by R91368-R19373 and R95283-R95286),
CC or a fragment or allelic form of one of these antibodies. A cytoplasmic
CC anchor, or a nuclear localisation signal may also be included in the
CC agent. The agent is able to modulate a biochemical pathway in a cell in
CC which products of opioid peptide precursor (OPP) genes participate in
CC order to induce the cell to apoptose. The agents can be used for the
CC treatment of cancer or for inducing apoptosis in lens cells following a
CC cataract operation. These agents promote apoptosis of proliferating
CC cells with less, or no, effect on normal mature cell types. The agents
CC may be administered in combination with a genotoxic or cell cycle arrest
CC agent. Alternatively, the agent may be complexed with a
CC chemotherapeutic, irradiation or cell cycle arrest (synchronisation)
CC agent.

CONDUCTANCE AND THUS PRODUCES HYPERPOLARIZATION (INHIBITION OF
NEURONAL FIRING).
CC -!- SUBUNIT: PENTAMER COMPOSED OF ALPHA (48 KD) AND BETA (58 KD)
SUBUNITS. A THIRD TYPE OF SUBUNIT (93 KD) IS A PERIPHERAL MEMBRANE
PROTEIN ASSOCIATED WITH THE CYTOPLASMIC DOMAINS OF THE RECEPTOR
CORE.
CC -!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
CC -!- TISSUE SPECIFICITY: THE GLYCINE RECEPTOR IS ABUNDANT IN THE SPINAL
CORD AND BRAINSTEM OF VERTEBRATES.
CC -!- DEVELOPMENTAL STAGE: THE ALPHA-2* SUBUNIT ISOFORM IS PRESENT ONLY
IN NEONATAL RATS. ISOFORMS ALPHA-2A AND ALPHA-2B ARE PRESENT IN
THE PRE- AND NEONATAL BRAIN. AT LATER POSTNATAL STAGES, ALPHA-2A
LEVELS GREATLY DECREASE WHILE ALPHA-2B IS BARELY DETECTABLE.
CC -!- THE ALPHA SUBUNIT BINDS STRYCHNINE.
CC -!- ALTERNATIVE PRODUCTS: TWO FORMS OF THE ALPHA-2 SUBUNIT (ALPHA-2*
AND ALPHA-2B) ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME
GENE.
CC -!- SIMILARITY: IDENTICAL TO THE HUMAN ALPHA-2 SUBUNIT, EXCEPT FOR 5
SUBSTITUTIONS AT POSITIONS 18, 24, 37, 194 AND 404. SUBSTITUTION
AT POSITION 194 (G -> E) ACCOUNTS FOR THE LOWER STRYCHNINE
SENSITIVITY OBSERVED IN NEONATAL RATS.
CC -!- SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNELS FAMILY.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 PT New integrin beta sub-unit and its nucleic acid - forms
 PT hetero-dimers with sub-units alpha-V and alpha-E, useful as a
 PT diagnostic

PS Disclosure: Fig 3: 43pp; English.
 CC The sequences given in R26322-23 are human and guinea pig integrin beta
 CC subunit, beta-6 proteins. The beta-6 subunit is a surface receptor
 CC which is useful in mediating critical aspects of cell processes in
 CC conjunction with an integrin alpha subunit. Beta-6 is clearly
 CC different from beta-1, beta-2, beta-3 and other beta subunits which
 CC have been discovered. The 11 amino acid carboxyl-terminal extension
 CC distinguishes it from other beta subunits. This cytoplasmic tail
 CC indicates that beta-6 regulates signal transduction differently from
 CC other beta subunits. Beta-6 has been isolated from epithelial-derived
 CC tumour cells in association with the integrin alpha subunit, alpha-V.
 CC Beta-6 can associate with a variety of alpha subunits to form a
 CC functional integrin. Alpha-V/beta-6 can bind extracellular matrix
 CC molecules, eg. ligands, pref. containing the sequence Arg-Gly-Asp,
 CC such as vitronectin or fibronectin.

 PT diagnostic
 PS Claim 2; Fig 3: 43pp; English.
 CC The sequences given in R26322-23 are human and guinea pig integrin beta
 CC subunit, beta-6 proteins. The beta-6 subunit is a surface receptor
 CC which is useful in mediating critical aspects of cell processes in
 CC conjunction with an integrin alpha subunit. Beta-6 is clearly
 CC different from beta-1, beta-2, beta-3 and other beta subunits which
 CC have been discovered. The 11 amino acid carboxyl-terminal extension
 CC distinguishes it from other beta subunits. This cytoplasmic tail
 CC indicates that beta-6 regulates signal transduction differently from
 CC other beta subunits. Beta-6 has been isolated from epithelial-derived
 CC tumour cells in association with the integrin alpha subunit, alpha-V.
 CC Beta-6 can associate with a variety of alpha subunits to form a
 CC functional integrin. Alpha-V/beta-6 can bind extracellular matrix

CC molecules, eg. ligands, pref. containing the sequence Arg-Gly-Asp,
 CC such as vitronectin or fibronectin.

 PT New Heliothis armigera entomopoxvirus 11 kD polypeptide - useful in
 PT insecticidal compositions for controlling insect pests
 PS Claim 18; Fig 1b; 31pp; English.
 CC A polypeptide sequence (W15400) is deduced from the Type 145 open
 CC reading frame (ORF) of Orgyia pseudotsugata nuclear polyhedrosis
 CC virus (OpNPV). It shows homology to an 11 kDa polypeptide (see also
 CC W15397) from Heliothis armigera entomopoxvirus and to deduced amino
 CC acid sequences from OpNPV ORF 150 and Autographa californica and
 CC Bombyx mori NPV type 145 and 150 ORFs (see also W15398-99,
 CC W15401-402). A generic sequence (W15396) is provided for this
 CC newly recognised family of insecticidal polypeptides. The
 CC polypeptides, or their insecticidally-active fragments, can be
 CC expressed in host cells, esp. Sf9 or H2-BCIRL-AM1 insect cells, for
 CC use in controlling the proliferation of insect pests. They can also
 CC be expressed in transgenic plants to improve insect resistance.

PT Recombinant polynucleotide having sequence derived from
PT insulinoma-associated antigen - useful for diagnosis and
PT identification of insulinoma and neuroendocrine tumour
PT Disclosure; Page 34-36; 46pp; English.
PS The IA-1 gene is uniquely expressed in malignant neuroendocrine
CC tissues and/or cell lines. Its sequence includes zinc-finger DNA-
CC binding motifs and dibasic amino acid pro-hormone conversion sites.
CC The restricted tissue distribution and unique sequence motifs of IA-1
CC suggest that IA-1 may function as a regulatory factor in islet
CC cell transformation. The gene, its translation prod. and antibodies
CC to this can be used as probes (either by hybridisation or in ELISA
CC or Western Blot assays) to diagnose correctly human insulinomas and
CC neuroendocrine tumours. The antibodies to IA-1 can be used to
CC substantially purify or separate IA-1 from surrounding native
CC protein.

 PT New DNA encoding amino-peptidase from Haemonchus contortus and
 PT derived peptide(s) - useful in protective vaccines, for new
 PT vectors, transformed cells and oligosaccharide, for incorporation
 PT in virus or microbe
 PS Claim 6; Page 78-80; 137pp; English.
 CC The sequences given in R51280-82 represent variants of the helminth
 CC aminopeptidase H110D encoded by the genes H11-3, -2 and -1 respectively.
 CC H110D is a protein doublet which shows homology to a family of integral
 CC membrane aminopeptidases. The differences between the coding sequences
 CC and the translated products, can be attributed to different mRNAs of
 CC the multigene family, and also to different variants of the H110D-
 CC encoding sequence being present at different stages of the life
 CC cycle, or in strains differing in geographical origin. Antigenic
 CC fragments of these aminopeptidases may be used in vaccines to stimulate
 CC immune response against helminth parasites in humans or other animals.
 CC The DNA sequences encoding these proteins may be incorporated into a
 CC virus or microbe and used in a similar manner.

 PT Cloned gene or fragment encoding antigenic protein -
 PT which binds with antibodies against avian coccidia, and

PT transformed cells used in vaccine
 PS Claim 10; Page 93; Fig 14; 134pp; English.
 CC It is encoded by an open reading frame contained within the sequence of
 CC clone 533 which was derived from an E. tenella genomic library screened
 CC with radioactively labelled cDNA encoding the GX5401 antigen. It is of
 CC about 250 kd. It carries several repeated peptide sequences and
 CC is rich in cysteine residues. The open reading frame also encodes a
 CC potential signal sequence for protein secretion. Also new are an
 CC expression vector contg. cloned gene, and host cells transformed with
 CC the vector. The transformed cells are used in a vaccine to immunise
 CC birds against avian coccidiosis. By labelling the peptides, they can be
 CC used as a type-specific probe. May also be used in an assay to detect
 CC Ab against the coccidia. The Abs are used to identify transformed cells
 CC contg. the DNA.

 PT Inhibitors of interaction between insulin-like growth factor -
 PT useful for, e.g. treating or preventing hyperglycaemia, obesity and
 PT neurological disorders, and are optionally formulated with
 PT thiazolidinone
 PS Example 7; Page 57; 133pp; English.
 CC The invention relates to the isolation of compounds, especially peptides,
 CC that: (a) inhibit interaction between an insulin-like growth factor (IGF)
 CC with any one of its binding proteins (IGFBP), and (b) do not bind to a
 CC human IGF receptor (hIGFR), e.g. see W67476-W67491 and W67503-W67565.
 CC The peptides are produced synthetically or are isolated from peptide
 CC libraries where the encoding sequence is generated so that the resulting
 CC peptide produced retains its structure in solution. This sequence
 CC represents a peptide isolated from a g8 display peptide library which
 CC binds the IGF-1 binding protein IGFBP-3. The compounds are used to
 CC increase serum and tissue levels of active IGF-1, preferably also to
 CC reduce insulin and plasma growth hormone (GH) secretion, and blood
 CC glucose levels, without direct stimulation of secretion or release of
 CC endogenous GH. Particularly the compounds are used to treat or prevent
 CC hyperglycaemia, obesity-related disorders, neurological, cardiac,
 CC anabolic, renal and immunological diseases.

PT New isolated mutant presenilin-1 genes - useful for developing
PT products for use in detection, diagnosis and therapy of Alzheimer's
PT disease and for drug screening
PS Claim 19; Page 203-204; 238pp; English.
CC This polypeptide comprises human presenilin-2 (hps2). Its amino
CC acid sequence was deduced from an isolated cDNA clone (see V04669).
CC Human and murine presenilin-1 sequences are also provided (see
CC W23964-66). Mutations in the PS-1 and PS-2 genes are linked to
CC the development in humans of forms of familial Alzheimer's disease
CC (FAD) and may be causative of other disorders, e.g. cognitive,
CC intellectual, neurological or physiological disorders such as
CC cerebral haemorrhage, schizophrenia, depression, mental retardation
CC and epilepsy. Use of the nucleic acids and proteins comprising or
CC derived from the presenilins is made in screening and diagnosing
CC FAD, identifying and developing therapeutics for treatment of FAD,
CC and in producing cell lines and transgenic animals useful as models
CC of FAD. Methods for identifying substances that bind to, or

CC modulate the activity of a presenilin protein, and methods for
CC identifying substances that affect the interaction of a
CC presenilin-interacting protein with a presenilin protein are also
CC disclosed. 448 AA;

PT New Alzheimer's disease related gene, AD4 - used to develop prods.
PT for detecting pre-disposition to or for diagnosis, prevention or
PT treatment of Alzheimer's disease
PS Example 4; Fig 2; 83pp; English.
CC A genetically isolated group of families with autosomal dominant
CC early-onset Alzheimer's Disease (AD) has been studied and initial
CC mapping analyses have predicted the AD locus resides on chromosome 1.
CC The present sequence corresponds to the protein encoded by the
CC wild-type coding sequence (i.e. the AD4 gene, also known as STM2).
CC The group of families has been designated the Volga German (VG)
CC kindreds. The entire gene has been amplified from VG individuals
CC and unaffected individuals (from VG and unrelated lineages).
CC Sequence analysis has shown that affected individuals have a
CC nucleotide change at codon 141 resulting in an amino acid alteration
CC from Asn to Ile. Portions of a mutant AD4, especially one in which
CC Asn at position 141 has been replaced by Ile, can be used in a
CC peptide vaccine. Detection of mutant AD4, for example using antibodies
CC specific for the protein or using nucleic acid probes specific for the

CC mutant gene, provides a means of diagnosing Alzheimer's disease.

Statistics: Mean 20.008; Variance 24.434; scale 0.819

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 19:03:36 1999; MasPar time 3.36 Seconds
Tabular output not generated. 75.687 Million cell updates/sec

Title: >US-09-041-236-2
Description: (554-562) from US09041236.pep (28 of 45)
Perfect Score: 66
Sequence: 1 SCEPGHOSP 9

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 20.649; Variance 22.790; scale 0.906

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -!- FUNCTION: INTEGRINS ARE A LARGE FAMILY OF CELL SURFACE
GLYCOPROTEINS THAT MEDIATE CELL TO CELL & CELL TO MATRIX ADHESION.
CC -!- SUBUNIT: DIMER OF AN ALPHA AND BETA SUBUNIT. BETA-6 ASSOCIATES
CC WITH ALPHA-V.
CC -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
CC -!- PTM: THE CYSTEINE RESIDUES ARE INVOLVED IN INTRACHAIN DISULFIDE
BONDS.
CC -!- SIMILARITY: BELONGS TO THE INTEGRIN BETA CHAIN FAMILY.

Statistics: Mean 20.003; Variance 22.069; scale 0.906

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New modulators of nitric oxide synthase - used for treating e.g.
PT toxic shock, auto-immune disease, inflammatory disease, diabetes,
PT hypertension, infections or cancer
PS Example 1; Fig 1; 78pp; English.
CC This sequence represents a E. coli flavodoxin fragment which is used to
CC describe a novel method that identifies an agent which inhibits nitric
CC oxide synthase (NOS) by blocking calmodulin (CAM) activation of the NOS.
CC Such agents which modulate NOS activity can be used to treat a disease or
CC condition associated with nitric oxide production. Agents which inhibit
CC neuronal NOS (NNOS) can be used to prevent brain damage in conditions
CC involving cerebral ischaemia or reperfusion injury, such as head trauma.
CC Agents which decrease the activity of inducible NOS (INOS) can be used to
CC treat a condition modulated by production of NO by INOS, such as septic
CC shock, toxic shock, autoimmune disease such as rheumatoid arthritis,
CC inflammatory conditions such as inflammatory bowel disease, multiple
CC sclerosis, diabetes, or to combat dementia, immune system destruction,
CC and/or physical deterioration in individuals infected with the AIDS
CC virus. Agents which activate INOS can be used to treat disease relating
CC to dysplasia, cancer, or infectious disease. Activation of INOS can
CC produce cytotoxic levels of NO which would aid in the elimination of
CC dysplastic or cancerous tissue, or aid in the control of infectious
CC agents such as viruses, microbes, or other parasites. Agents which

CC increase the activity of endothelial NOS (ENOS) can be used to treat a
CC condition modulated by production of NO by ENOS such as hypertension,
CC atherosclerosis or acute asthma. An agent which activates ENOS or NNOS in
CC the corpus cavernosa can be used for treating male erectile dysfunction.
CC The products and methods can also be used for detection and drug
CC screening. 116 AA;

PT Morphogen-induced modulation of inflammatory response - and
PT resulting tissue damage, e.g. in autoimmune diseases, diabetes,
PT asthma, ischemia reperfusion injury, etc.
PS Claim 26; Page 121-123; 165pp; English.
CC Human osteogenic protein (OP)-2 is a preferred morphogen for use in
CC treating tissue damage in e.g. inflammatory disease, autoimmune
CC disease, arthritis, psoriasis, dermatitis, diabetes and emphysema.
CC Proteins having at least 70% homology with OP-2 amino acid
CC sequences can also be used. See R33400 for mature hOP-2.

PT Osteogenic device for implantation - comprising osteogenic
PT protein dispersed in porous matrix of collagen and
PT glycosaminoglycan
PS Claim 8; Page 34; 39pp; English.
CC The invention relates to an implantable device for inducing
CC endochondral bone formation in a shape conforming to the shape of the
CC device. The device comprises an osteogenic protein dispersed in a
CC porous matrix which is a polymer of collagen and glycosaminoglycan
CC crosslinked to an Mc value of 800 to 60,000. The osteogenic protein
CC comprises a pair of subunits constituting a stable dimer under
CC oxidising conditions. The present sequence (designated Op1), when
CC dimerised to form a homodimer or a heterodimer with certain other
CC protein sequences, can induce endochondral bone formation and hence
CC is preferred as one of the pair of subunits.

PT Polypeptides of G-coupled receptor proteins (GPRs) - useful for
PS binding GPR ligands or modulating GPR binding
PS Disclosure: Page 65-66; 160pp; English.
CC Proteins R4865-R48758 represent a range of G-protein coupled receptor
CC proteins selected from CAMP, adenosine, muscarinic acetylcholine,
CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
CC odorant, cytomagaloviral and other G-protein coupled receptors. The
CC receptor proteins were used to design polypeptides, pref. based on the
CC transmembrane domains, for use in G-protein coupled receptor ligand
CC binding assays. The polypeptide fragments retain biological activity
CC such as binding a GPR ligand or modulating GPR ligand binding to a GPR
CC (see R48759-R48758, R50569-R50807 and R89189-R89195 for examples of
CC polypeptide fragments). The polypeptide fragments can be used in
CC compositions for treating subjects suffering from a pathology related to
CC a GPR abnormality e.g. a psychotic disorder such as schizophrenia.

PT Conjugates formed by site-specific attachment of nucleic
PT photo-affinity agents to antibodies - useful as immunoassay reagents
PT for detecting antigen, also immuno-therapeutic complex also
PT containing cytotoxin for treating cancer, infection or genetic
PT disease.
PS Disclosure: Figure 12c; 75pp; English.
CC This is the amino acid sequence of 8019 VK antibody. The invention
CC relates to the site-specific photo-attachment of a nucleic
CC photoaffinity compound to an antibody which comprises reacting them
CC under conditions that promote attachment of the photoaffinity
CC compound to at least 1 nucleotide binding site in the antibody. Also
CC claimed are: photoaffinity compound-antibody conjugates produced this
CC way, and immuno-conjugates comprising cytotoxic or therapeutic agent
CC site-specifically attached to the photoaffinity compound in the
CC conjugate. When the conjugate is labelled it is used for detection or
CC quantitation of an antigen (Ag) by any standard immunoassay format,
CC while immuno-conjugates are used therapeutically, e.g. in cases of
CC tumours, infections or genetic diseases, or as imaging agents. The
CC photoaffinity compounds are attached under mild, physiological
CC conditions, particularly a single 2-5 minute photoactivation results in
CC almost 100% attachment (contrast conditions usually required to attach
CC molecules to antibodies.

PT Treating cystic kidney disease - using renal therapeutic agents or
PT sequences encoding them, especially from the osteogenic protein/bone
PT morphogenic protein family
PS Claim 4; Page -; 67pp; English.
CC The invention relates to methods for treating cystic kidney diseases. The
CC method comprises administering an effective amount of a renal therapeutic
CC agent or a polynucleotide encoding the therapeutic agent. The therapeutic
CC agent is preferably a soluble or membrane bound polypeptide, e.g. a
CC member of the osteogenic protein/bone morphogenic protein (OP/BMP) family
CC within a transforming growth factor-beta superfamily of proteins. It is
CC especially one of the polypeptides hOP1, hOP1-PP, OPI-18Ser, OPS, OP7,
CC OPI-16Ser, OPI-16Leu, OPI-16Met, OPI-16Ala, OPI-16Val, MOPI, MOPI-PP,
CC hOP2, hOP2-PP, hOP2-Ala, hOP2-Pro, hOP2-Arg, or hOP2-Ser or their
CC biologically active homologues. The method is used to treat humans
CC having, or at risk of, cystic kidney disease, e.g. autosomal recessive
CC (infantile) polycystic disease, multicystic dysplastic kidney disease,
CC uraemic medullary cystic disease, and autosomal dominant polycystic
CC kidney disease. The present sequence represents possible mature human
CC osteogenic protein 2 (OP2) that can be used as a therapeutic agent in
CC the method of the invention.
CC Note: This sequence is not provided in the specification. It has been

PT Morphogen-induced modulation of inflammatory response - and
PT resulting tissue damage, e.g. in autoimmune diseases, diabetes,
PT asthma, ischemia reperfusion injury, etc.
PS Claim 26; Page 103-104; 165pp; English.
CC Osteogenic protein (OP)-2 is a preferred morphogen
CC for use in treating tissue damage in e.g. inflammatory disease,
CC autoimmune disease, arthritis, psoriasis, dermatitis, diabetes and
CC emphysema. Proteins having at least 70% homology with OP-1 amino
CC acid sequences can also be used. See R33401 for mOP-2 sequence.

 RT "Cloning of the cDNA for the human beta 1-adrenergic receptor."
 RL PROC. NATL. ACAD. SCI. U.S.A. 84:7920-7924(1987).
 CC -!- FUNCTION: BETA-ADRENERGIC RECEPTORS MEDIATE THE CATECHOLAMINE-
 CC INDUCED ACTIVATION OF ADENYLATE CYCLASE THROUGH THE ACTION OF G
 CC PROTEINS. THIS RECEPTOR BINDS EPINEPHRINE AND NOREPINEPHRINE WITH
 CC APPROXIMATIVELY EQUAL AFFINITY.
 CC -!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
 CC -!- PTM: HOMOLOGOUS DESENSITIZATION OF THE RECEPTOR IS MEDIATED BY ITS
 CC PHOSPHORYLATION BY BETA-ADRENERGIC RECEPTOR KINASE.
 CC -!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
 CC

PT Mutain of basic fibroblast growth factor -
PT having fibroblast growth promoting activity, growth stimulating
PT activity of capillary endothelial cells and angiogenic activity..
PS Disclosure: lpp; English.
CC Using plasmid pTB854, E.coli MM294 was transformed, whereby the
CC strain E.coli MM294/pTB854 was obtained, which
CC harbors the plasmid pTB854 expressing the mutain represented here.
CC The mutain has high stability and is low in toxicity.
CC It can be used as a healing accelerator for e.g. burns, wounds
CC or postoperative tissues or as a therapeutic drug based on its
CC angiogenic action for e.g. thrombosis or arteriosclerosis. It can also
CC be used as a reagent for acceleration of cell cultivation. A mutain
CC where at least one constituent cysteine is replaced by serine is
CC preferred because the mutain is highly stable and intermolecular bridges
CC and linkages are reduced or eliminated.
CC See also N81971-97.

PT Nucleic acid encoding proteins involved in bacterial synthesis of
PT riboflavin - also mutant or recombinant bacteria producing
PT riboflavin at high levels
PS Example 7; Fig 3A-S; 62pp; English.
CC This is the amino acid sequence of a 44 kba rib-specific deaminase
CC encoded by open reading frame 5 (ORF5) of the Bacillus subtilis rib
CC operon (see V71600). The deaminase is predicted to catalyse the
CC formation of 5-amino-6-(ribosylamino)-2,4(1H,3H)-pyrimidinodione
CC 5'-phosphate from 2,5-diamino-6-(ribosylamino)-4(3H)-pyrimidinodione
CC 5-phosphate, and shows 39% identity to the deoxycytidylate
CC deaminase of E. coli phage T2. The invention provides vectors and
CC recombinant bacteria for overproducing riboflavin, in which nucleic
CC acids overproducing riboflavin biosynthetic proteins (see
CC W81549-55) are introduced in the chromosome of the host organism at
CC multiple sites or in multiple copies. The rib operon, e.g.
CC comprising ORFs 2-5 and the beta-riboflavin synthase gene, is used
CC to make such recombinant bacteria. The rib operon can be
CC deregulated by replacing its control regions with sequences that
CC allow constitutive or unregulated expression. The recombinant
CC bacteria produce at least 10 g/l riboflavin.

PT sequences
PS Claim 9; Fig 4B; 71pp; English.
CC This sequence represents a partial transcription factor, TFE3 sequence
CC from a 5'-RACE product derived from a novel fusion protein
CC constructed from the NonO protein (also known as p54-nrb) and the
CC transcription factor TFE3 which is found in cell line UOK109 and used in
CC a method for the diagnosis, prophylactic and therapeutic treatment of
CC papillary renal cell carcinoma. The translocation t(X;1) (p11.2;q21.2)
CC found in papillary renal cell carcinoma (PRCC) associated protein (PRCC)
CC results in a fusion of the TFE3 gene with a new chromosome 1 gene
CC designated PRCC (at lq21.2), resulting in expression of a fusion protein
CC between the N-terminus of PRCC and almost the whole of the TFE3 gene.
CC Normal TFE3 transcripts are no longer produced. Two other fusion partners
CC for TFE3 have also been detected; NonO, from a invX (p11.2; q13-24 or 12)
CC translocation and the PSF splice factor gene, resulting in t(X;1)
CC (p11.2;p34). These trans-locations define a subgroup of PRCC generally
CC encountered in patients younger than 25.

CC combination of a rhuIL-lra and a controlled release polymer such as a
CC hydrogel ester (e.g. a hyaluronan or its salt). The receptor antagonist
CC has a relatively short half life, so administering it in a controlled
CC release formulation provides long lasting suppression of interleukin-1
CC (IL-1) activity. The composition is used in human or veterinary medicine
CC to treat diseases mediated by IL-1, such as inflammation, e.g. rheumatoid
CC or osteoarthritis. Conditions resulting from strains, sprains, injury,
CC infection, cartilage damage or orthopaedic surgery can also be treated
CC with this composition. Treatment of a wide range of other diseases is
CC also contemplated, e.g. inflammatory bowel disease, multiple sclerosis,
CC multiple myeloma, myelogenous or other leukemias, brain injuries, graft
CC versus host disease, Alzheimer's disease and temporal mandibular joint
CC disease.

 PT Treating graft-versus-host diseases - comprises administering
 PT recombinant interleukin-1 receptor antagonists
 PS Claim 1; Fig 1; 14pp; English.
 CC This is the amino acid sequence of the recombinant intracellular
 CC interleukin-1 (IL-1) receptor antagonist, which prevents binding of
 CC IL-1 to its receptor. In the method of the invention it is used in
 CC the treatment of graft-versus-host disease. It is also used to
 CC prevent undesirable cell adhesion of IL-1 receptor positive cells to
 CC endothelial cells. This is especially useful in autoimmune diseases
 CC or states e.g. graft-versus-host rejection in bone marrow transplants
 CC (in leukaemia treatment).

CC -!- FUNCTION: TRANSFERS A METHYLENE GROUP FROM S-ADENOSYL-L-METHIONINE
TO THE CIS DOUBLE BOND OF AN UNSATURATED FATTY ACID CHAIN
RESULTING IN THE REPLACEMENT OF THE DOUBLE BOND WITH A METHYLENE
BRIDGE. MYCOLIC ACIDS, WHICH REPRESENT THE MAJOR CONSTITUENT OF
MYCOBACTERIAL CELL WALL COMPLEX, ACT AS SUBSTRATES.

```

```

CC -!- CATALYTIC ACTIVITY: S-ADENOSYL-L-METHIONINE + PHOSPHOLIPID
CC OLEFINIC FATTY ACID -> S-ADENOSYL-L-HOMOCYSTEINE + PHOSPHOLIPID
CC -!- SUBCELLULAR LOCATION: CYTOPLASMIC.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II,
CC (Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor binding
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

 PT Nucleic acid molecule encoding CD100 antigen - which stimulates
 PT leukocyte response, e.g. B cell aggregation, differentiation,
 PT survival and T cell proliferation
 PS Example 8; Page 86-89; 135pp; English.
 CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
 CC protein that stimulates a leukocyte response, including B cell
 CC aggregation, B cell differentiation, B cell survival and/or T cell
 CC proliferation. Its amino acid sequence was deduced from a cDNA
 CC clone (T60666) isolated from murine T cells. Human CD100 antigen
 CC (W17657) has also been identified. CD100 polypeptides and fusion
 CC proteins, nucleic acids, and host cells expressing CD100 can be
 CC utilised in diagnostic and therapeutic methods involving modulation
 CC of B and T cell responses, neuron axonal growth and immune cell-
 CC nerve cell interaction.

Title: >US-09-041-236-2
 Description: (8-606) from US09041236.pep (31 of 45)
 Perfect Score: 4461
 Sequence: 1 AAASAGHLRSGPRIFAVWK.....SYFREAHQWLLPEDGIMAE 599

Scoring table: PAM 150
 Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
 Listing first 45 summaries

Database: swiss-prot37
 1:swissprot

Statistics: Mean 50.315; Variance 76.016; scale 0.662

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 48.787; Variance 75.124; scale 0.649
Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Statistics: Mean 36.480; Variance 154.463; scale 0.236

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 PT Gene encoding new semaphorin nerve growth inhibitor - useful in
 PT diagnosis, treatment and study of neurological diseases
 PS Claim 1: Page 33-37; 49pp; Japanese.
 CC The present sequence represents human semaphorin, a nerve growth
 CC inhibitor. The semaphorin protein, and gene encoding the protein,
 CC and their derivatives, are used in the diagnosis, treatment and
 CC study of neurological disorders such as atopic skin inflammation,
 CC autoimmune diseases and pain.

 PT Nucleic acid molecule encoding CD100 antigen - which stimulates
 PT leukocyte response, e.g. B cell aggregation, differentiation,
 PT survival and T cell proliferation
 PS Example 8: Page 86-89; 135pp: English.
 CS Mouse CD100 antigen (M17657) is a novel leukocyte semaphorin-like
 CC protein that stimulates a leukocyte response, including B cell
 CC aggregation, B cell differentiation, B cell survival and/or T cell
 CC proliferation. Its amino acid sequence was deduced from a cDNA
 CC clone (T60666) isolated from murine T cells. Human CD100 antigen
 CC (M17657) has also been identified. CD100 polypeptides and fusion
 CC proteins, nucleic acids, and host cells expressing CD100 can be
 CC utilised in diagnostic and therapeutic methods involving modulation
 CC of B and T cell responses, neuron axonal growth and immune cell-
 CC nerve cell interaction.

PT New class of semaphorin peptide(s) and polypeptide(s) - are

PS potent modulators of nerve cell growth and regeneration

Example 2: Page 65-67; 101P; English.

The sequence of the vaccinia virus semaphorin IV protein.

The gene sequence was isolated as the A39R open reading frame sequence

from variola, based on sequence homology searches of a database with the

grasshopper, Tribolium and Drosophila semaphorin sequences. The proteins

encoded by the grasshopper semaphorin I (Q87441), human semaphorin III

(Q87442), vaccinia virus semaphorin IV, Drosophila semaphorin I and II

(Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)

virus semaphorin IV (Q87447) genes were used to generate a series of

peptides (R70370-R70418), which retain semaphorin receptor binding

activity. The semaphorin derived or semaphorin receptor derived peptides

are potent modulators of nerve cell growth, immune responsiveness and

viral pathogenesis. They can be used in diagnosis and treatment of

neurological disease and neuro-regeneration, immune modulation and

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Example 4; Page 69-72; 90pp; Japanese.
CC The present sequence represents human semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC anti-allergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

Mpsrch.p protein - protein database search, using Smith-Waterman algorithm
Run on: Thu Jul 8 19:13:59 1999; Maspar time 18.36 Seconds
Tabular output not generated. 906.652 Million cell updates/sec

Title: >US-09-041-236-2
Description: (18-606) from US09041236.pep (32 of 45)
Perfect Score: 4401
Sequence: 1 SGPRFAVMKGVGHGQDRVDF.....SYREQNHQMLPEDGIMAE 589

Scoring table:
PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 50.252; Variance 76.002; scale 0.661

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Statistics: Mean 36.421; Variance 154.264; scale 0.236

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Claim 1; Page 60-64; 90pp; Japanese.
CC The present sequence represents rat semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2: Page 79-82; 101pp: English.
CC The sequence of the *Drosophila* semaphorin II protein. The gene was
CC isolated by PCR using primers based on sequence homology between the
CC complete grasshopper and partial *Tribolium* and *Manduca* (moth) semaphorin
CC gene sequences. The products gave two different sequences, each of which
CC was used to obtain its respective complete sequence: semaphorin I
CC (087444) and II. The proteins encoded by the grasshopper semaphorin I
CC (087441) human semaphorin III (087442), vaccinia virus semaphorin IV,
CC *Drosophila* semaphorin I and II, *Tribolium* semaphorin I (087446) or
CC variola major (smallpox) virus semaphorin IV (087447) genes were used to
CC generate a series of peptides (R70370-R70416), which retain semaphorin
CC receptor binding activity. The semaphorin derived or semaphorin receptor
CC derived peptides are potent modulators of nerve cell growth, immune
CC responsiveness and viral pathogenesis. They can be used in diagnosis and
CC treatment of neurological disease and neuro-regeneration, immune
CC modulation and diagnosis and treatment of viral and oncological infection
CC and diseases.

Statistics: Mean 48.661; Variance 75.239; scale 0.647

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Statistics: Mean 36.340; Variance 153.758; scale 0.236

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2: Page 60-63: 101pp: English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (087441), human semaphorin III,
CC vaccinia virus semaphorin IV (087443), Drosophila semaphorin I and II
CC (087444-5), Tribolium semaphorin I (087446) or varicella major (smallpox)
CC virus semaphorin IV (087447) genes were used to generate a series of
CC peptides (870370-870418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

PT Gene encoding new semaphorin nerve growth inhibitor - useful in
PT diagnosis, treatment and study of neurological diseases
PS Claim 1: Page 33-37; 49pp: Japanese.
CC The present sequence represents human semaphorin, a nerve growth
CC inhibitor. The semaphorin protein, and gene encoding the protein,
CC and their derivatives, are used in the diagnosis, treatment and
CC study of neurological disorders such as atopic skin inflammation,
CC autoimmune diseases and pain.

PT	Nucleic acid molecule encoding CD100 antigen - which stimulates		
PT	leukocyte response, e.g. B cell aggregation, differentiation,		
PT	survival and T cell proliferation		
PS	Example 8: Page 86-89: 135pp: English.		
CC	Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like		
CC	protein that stimulates a leukocyte response, including B cell		
CC	aggregation, B cell differentiation, B cell survival and/or T cell		
CC	proliferation. Its amino acid sequence was deduced from a cDNA		
CC	clone (T60666) isolated from murine T cells. Human CD100 antigen		
CC	(W17657) has also been identified. CD100 polypeptides and fusion		
CC	proteins, nucleic acids, and host cells expressing CD100 can be		
CC	utilised in diagnostic and therapeutic methods involving modulation		
CC	of B and T cell responses, neuron axonal growth and immune cell-		
CC	neve cell interaction.

PT	Nucleic acid molecule encoding CD100 antigen - which stimulates leukocyte response, e.g. B cell aggregation, differentiation, survival and T cell proliferation
PS	Claim 7: Page 70-72; 135pb: English.
CC	Human CD100 antigen (Wt17657) is a novel leukocyte semaphorin-like protein that stimulates a leukocyte response, including B cell aggregation, B cell differentiation, B cell survival and/or T cell proliferation. Its amino acid sequence was deduced from a cDNA clone (T60665) isolated by COS cell expression cloning. CD100 polypeptides and fusion proteins, nucleic acids, and host cells expressing CD100 can be utilized in diagnostic and therapeutic methods involving modulation of B and T cell responses, neuron axonal growth and immune cell-nerve cell interaction.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Claim 1: Page 60-64; 90pp; Japanese.
CC The present sequence represents rat semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC anti allergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

Mpsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 19:21:57 1999; Maspar time 17.91 Seconds
Tabular output not generated. 896.325 Million cell updates/sec

Title: >US-09-041-236-2
Description: (39-606) from US09041236.pap (34 of 45)
Perfect Score: 4236
Sequence: 1 QTEPHTVLFHPGSSVWVG.....SYFREAQHWQLLPEDGIMAE 568

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries
Database: swiss-prot37
1:swissprot

Statistics: Mean 50.069; Variance 75.814; scale 0.660

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 36.295; Variance 153.116; scale 0.237

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT	Nerve extension inhibitor protein semaphorin W - is useful as therapeutic drug and diagnostic and research reagent
PS	Claim 1; Page 60-64; 90pp; Japanese.
CC	The present sequence represents rat semaphorin W. Semaphorin W and its derivatives are nerve extension inhibitors which are useful as antiallergic, immunosuppressant and anticancer agents. The DNA encoding semaphorin W can also be used in gene therapy, e.g. using a viral vector. The proteins, peptides, DNA and antibodies which recognise the protein or peptides, can be used as diagnostic or research reagents. Semaphorin W can be used as a screen for semaphorin W antagonists with possible therapeutic use.

PT New polynucleotides and secreted proteins - obtained from human
PT foetal brain, human adult testes, human adult brain and human adult
PT salivary gland cDNA libraries
PS Claim 17j; Page 71-74; 110pp; English.
CC This sequence represents a novel secreted protein from clone CJ145_1
CC isolated from a human fetal brain cDNA library. This protein has
CC applications for nutritional use, cytokine and cell
CC proliferation/differentiation activity, immune stimulating or
CC suppressing activity, hematopoiesis regulating activity, tissue growth
CC activity, activin/inhibin activity, chemotactic/chemokinetic activity,
CC haemostatic and thrombotic activity, receptor/ligand activity,
CC anti-inflammatory activity, cadherin/tumour invasion suppressor activity,
CC tumour inhibition activity and other activities.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 85-88; 101pp; English.
CC The sequence of the beetle Tribolium genomic DNA. The gene was
CC isolated by PCR using Tribolium semaphorin III (087442), the
CC grasshopper semaphorin I (087441), human semaphorin III (087443),
CC vaccinia virus semaphorin IV (087443), Drosophila semaphorin I and II
CC (087444-5), Tribolium semaphorin I or variola major (smallpox) virus
CC semaphorin IV (087447) genes were used to generate a series of peptides
CC (R70370-R70418), which retain semaphorin receptor binding activity. The
CC semaphorin derived or semaphorin receptor derived peptides are potent
CC modulators of nerve cell growth, immune responsiveness and viral
CC pathogenesis. They can be used in diagnosis and treatment of neurological
CC disease and neuro-regeneration, immune modulation and diagnosis and
CC treatment of viral and oncological infection and diseases.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 74-77; 101pp; English.
CC The sequence of the Drosophila semaphorin I protein. The gene was
CC isolated by PCR using primers based on sequence homology between the
CC complete grasshopper and partial Tribolium and Manduca (moth) semaphorin
CC gene sequences. The products gave two different sequences, each of which
CC was used to obtain its respective complete sequence: semaphorin I and II
CC (087445). The proteins encoded by the grasshopper semaphorin I (087441),
CC human semaphorin Iir (087442), vaccinia virus semaphorin IV, Drosophila
CC semaphorin I and II, Tribolium semaphorin I (087446) or variola major
CC (smallpox) virus semaphorin IV (087447) genes were used to generate a
CC series of peptides (R70370-R70418), which retain semaphorin receptor
CC binding activity. The semaphorin derived or semaphorin receptor derived
CC peptides are potent modulators of nerve cell growth, immune
CC responsiveness and viral pathogenesis. They can be used in diagnosis and
CC treatment of neurological disease and neuro-regeneration, immune
CC modulation and diagnosis and treatment of viral and oncological infection
CC and diseases.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 19:26:01 1999; Maspar time 17.59 Seconds
Tabular output not generated. 898.289 Million cell updates/sec

Title: >US-09-041-236-2
Description: (48-606) from US09041236.pep (35 of 45)
Perfect Score: 4170
Sequence: 1 HEPGSSVWVGGRKVLFD.....SYFRAQHMLLPEDGIMAE 559

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries
Database: swiss-prot37
1:swissprot

Statistics: Mean 49.993; Variance 75.468; scale 0.662

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 36.619; Variance 154.932; scale 0.236

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II,
CC (Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Claim 1: Page 60-64; 90pp; Japanese.
CC The present sequence represents rat semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

MPSrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 19:29:29 1999; Maspar time 18.79 Seconds

Tabular output not generated. 904.119 Million cell updates/sec

Title: >US-09-041-236-2

Description: (1-601) from US09041236.pep (36 of 45)

Perfect Score: 4488

Sequence: 1 LLLLLWAAASAGHLRSGP.....EAQGSYFRAQHQLLPED 601

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 50.410; Variance 76.174; scale 0.662

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 36.548; Variance 154.557; scale 0.236

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I (Q87445) or varicella major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

PT DNA encoding human and rat semaphorin Y - an inhibitor of nerve
PT extension
PS Claim 1; Page 65-70; 85pp; Japanese.
CC The present sequence represents human semaphorin Y, which inhibits
CC nerve extension. Semaphorin Y genes and proteins may be used to inhibit
CC peripheral nerve growth. Semaphorin Y antagonists can be used to
CC accelerate regrowth of the central nervous system.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I (Q87446) or varola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

FT Nucleic acid molecule encoding Cd100 antigen - which stimulates
FT leukocyte response, e.g. B cell aggregation, differentiation,
FT survival and T cell proliferation
PS Example 8; Page 86-89; 135pp; English.
CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
CC protein that stimulates a leukocyte response, including B cell
CC aggregation, B cell differentiation, B cell survival and/or T cell
CC proliferation. Its amino acid sequence was deduced from a cDNA
CC clone (T60666) isolated from murine T cells. Human CD100 antigen
CC (W17657) has also been identified. CD100 polypeptides and fusion
CC proteins, nucleic acids, and host cells expressing CD100 can be
CC utilised in diagnostic and therapeutic methods involving modulation
CC of B and T cell responses, neuron axonal growth and immune cell-
CC nerve cell interaction.

FT New human semaforin gene - useful in the diagnosis of nervous system
FT and immune disorders
PS Claim 1; Page 10-12; 15pp; Japanese.
CC The present sequence represents human semaphorin (translated from the
CC Japanese specification as semaforin). Semaphorin has nerve extension
CC inhibiting activity. The semaphorin gene is useful for the diagnosis,
CC treatment and researches on nervous diseases and immune diseases.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Example 4; Page 69-72; 90pp; Japanese.
CC The present sequence represents human semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

PT New polynucleotides and secreted proteins - obtained from human
PT foetal brain, human adult testes, human adult brain and human adult
PT salivary gland cDNA libraries
PS Claim 17j; Page 71-74; 110pp; English.
CC This sequence represents a novel secreted protein from clone CJ145_1
CC isolated from a human fetal brain cDNA library. This protein has
CC applications for nutritional use, cytokine and cell
CC proliferation/differentiation activity, immune stimulating or
CC suppressing activity, hematopoiesis regulating activity, tissue growth
CC activity, activin/inhibin activity, chemotactic/chemokinetic activity,
CC haemostatic and thrombotic activity, receptor/ligand activity,
CC anti-inflammatory activity, cadherin/tumour invasion suppressor activity,
CC tumour inhibition activity and other activities.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II,
CC (Q87444-5), Tribolium semaphorin I (Q87446) or varola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor binding
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Claim 1; Page 60-64; 90pp; Japanese.
CC The present sequence represents rat semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

PT Nucleic acid molecule encoding CD100 antigen - which stimulates
PT leukocyte response, e.g. B cell aggregation, differentiation,
PT survival and T cell proliferation.
PS Claim 7; Page 70-72; 135pp; English.
CC Human CD100 antigen (W17657) is a novel leukocyte semaphorin-like
CC protein that stimulates a leukocyte response, including B cell
CC aggregation, B cell differentiation, B cell survival and/or T cell
CC proliferation. Its amino acid sequence was deduced from a cDNA
CC clone (T60665) isolated by COS cell expression cloning. CD100
CC polypeptides and fusion proteins, nucleic acids, and host cells
CC expressing CD100 can be utilised in diagnostic and therapeutic
CC methods involving modulation of B and T cell responses, neuron
CC axonal growth and immune cell-nerve cell interaction.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm
Run on: Thu Jul 8 19:41:02 1999; MasPar time 17.99 Seconds
Tabular output not generated. 900.173 Million cell updates/sec

Title: >US-09-041-236-2
Description: (1-573) from US09041236.pep (39 of 45)
Perfect Score: 4257
Sequence: 1 LLLLLWAAASAOQHLSRGP.....SCEPGHSPNCILFIENLTA 573

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 50.181; Variance 76.023; scale 0.660

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: HAS NAD+ GLYCOPOLYMERASE ACTIVITY AND EXTREMELY LOW ADP-
CC RIBOSYLTRANSFERASE ACTIVITY.
CC -!- CATALYTIC ACTIVITY: NAD(+) + L-ARGININE = NICOTINAMIDE +
CC N2-(ADP-D-RIBOSYL)-L-ARGININE.
CC -!- CATALYTIC ACTIVITY: NAD(+) + H2O = NICOTINAMIDE + ADP-RIBOSE.
CC -!- SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR.
CC -!- TISSUE SPECIFICITY: POSTTHYMIC T CELLS.
CC -!- PTM: TWO DISULFIDE BONDS ARE PRESENT (PROBABLE).
CC -!- SIMILARITY: BELONGS TO THE ARG-SPECIFIC ADP-RIBOSYLTRANSFERASE
CC FAMILY.

Statistics: Mean 36.230; Variance 148.600; scale 0.244

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

 PT Nerve extension inhibitor protein semaphorin W - is useful as
 PT therapeutic drug and diagnostic and research reagent
 PS Example 4; Page 69-72; 90pp; Japanese.
 CC The present sequence represents human semaphorin W. Semaphorin W and
 CC its derivatives are nerve extension inhibitors which are useful as
 CC antiallergic, immunosuppressant and anticancer agents. The DNA
 CC encoding semaphorin W can also be used in gene therapy, e.g. using
 CC a viral vector. The proteins, peptides, DNA and antibodies which
 CC recognise the protein or peptides, can be used as diagnostic or
 CC research reagents. Semaphorin W can be used as a screen for
 CC semaphorin W antagonists with possible therapeutic use.

 CC This sequence represents a novel secreted protein from clone CJ145_1
 CC isolated from a human fetal brain cDNA library. This protein has
 CC applications for nutritional use, cytokine and cell
 CC proliferation/differentiation activity, immune stimulating or
 CC suppressing activity, hematopoiesis regulating activity, tissue growth
 CC activity, activin/inhibin activity, chemotactic/chemokinetic activity,
 CC haemostatic and thrombotic activity, receptor/ligand activity,
 CC anti-inflammatory activity, cadherin/tumour invasion suppressor activity,
 CC tumour inhibition activity and other activities.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II,
CC (R7444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor binding
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

PT Gene encoding new semaphorin nerve growth inhibitor - useful in
PT diagnosis, treatment and study of neurological diseases
PS Claim 1; Page 33-37; 49pp; Japanese.
CC The present sequence represents human semaphorin, a nerve growth
CC inhibitor. The semaphorin protein, and gene encoding the protein,
CC and their derivatives, are used in the diagnosis, treatment and
CC study of neurological disorders such as atopic skin inflammation,
CC autoimmune diseases and pain.

 PT Nucleic acid molecule encoding CD100 antigen - which stimulates
 PT leukocyte response, e.g. B cell aggregation, differentiation,
 PT survival and T cell proliferation
 PS Example 8; Page 86-89; 135pp; English.
 CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
 CC protein that stimulates a leukocyte response, including B cell
 CC aggregation, B cell differentiation, B cell survival and/or T cell
 CC proliferation. Its amino acid sequence was derived from a cDNA
 CC clone (T60666) isolated from murine T cells. Human CD100 antigen
 CC (W17657) has also been identified. CD100 polypeptides and fusion
 CC proteins, nucleic acids, and host cells expressing CD100 can be
 CC utilised in diagnostic and therapeutic methods involving modulation
 CC of B and T cell responses, neuron axonal growth and immune cell-
 CC nerve cell interaction.

 PT New human semaphorin gene - useful in the diagnosis of nervous system
 PT and immune disorders
 PS Claim 1: Page 10-12; 15pp; Japanese.
 CC The present sequence represents human semaphorin (translated from the
 CC Japanese specification as semafolin). Semaphorin has nerve extension
 CC inhibiting activity. The semaphorin gene is useful for the diagnosis,
 CC treatment and researches on nervous diseases and immune diseases.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 85-88; 101pp; English.
CC The sequence of the beetle Tribolium semaphorin I protein. The gene was
CC isolated by PCR using Tribolium genomic DNA. The proteins encoded by the
CC grasshopper semaphorin I (Q87441), human semaphorin III (Q87442),
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I or variola major (smallpox) virus
CC semaphorin IV (Q87447) genes were used to generate a series of peptides
CC (R70370-R70418), which retain semaphorin receptor binding activity. The
CC semaphorin derived or semaphorin receptor derived peptides are potent
CC modulators of nerve cell growth, immune responsiveness and viral
CC pathogenesis. They can be used in diagnosis and treatment of neurological
CC disease and neuro-regeneration, immune modulation and diagnosis and
CC treatment of viral and oncological infection and diseases.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 74-77; 101pp; English.
CC The sequence of the Drosophila semaphorin I protein. The gene was
CC isolated by PCR using primers based on sequence homology between the
CC complete grasshopper and partial Tribolium and Manduca (moth) semaphorin
CC gene sequences. The products gave two different sequences, each of which
CC was used to obtain its respective complete sequence: semaphorin I and II
CC (Q87445). The proteins encoded by the grasshopper semaphorin I (Q87441),
CC human semaphorin III (Q87442), vaccinia virus semaphorin IV, Drosophila
CC semaphorin I and II, Tribolium semaphorin I (Q87446) or variola major
CC (smallpox) virus semaphorin IV (Q87447) genes were used to generate a
CC series of peptides (R70370-R70418), which retain semaphorin receptor
CC binding activity. The semaphorin derived or semaphorin receptor derived
CC peptides are potent modulators of nerve cell growth, immune
CC responsiveness and viral pathogenesis. They can be used in diagnosis and
CC treatment of neurological disease and neuro-regeneration, immune
CC modulation and diagnosis and treatment of viral and oncological infection
CC and diseases.

MPsrch_pp protein - protein database search, using Smith-waterman algorithm

Run on: Thu Jul 8 19:48:22 1999; MasPar time 17.96 Seconds
Tabular output not generated. 887.732 Million cell updates/sec

Title: >US-09-041-236-2
Description: (24-587) from US09041236.pap (41 of 45)
Perfect Score: 4201
Sequence: 1 AWWKHVGQDRVDFGQTEPH.....IENLTAQQYGHVFCERAOEGS 564

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 50.030; Variance 75.658; scale 0.661

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are

PT potent modulators of nerve cell growth and regeneration

PS Example 2; Page 60-63; 101pp; English.

CC The sequence of the human semaphorin III protein.

CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,

CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II

CC (Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)

CC virus semaphorin IV (Q87447) genes were used to generate a series of

CC peptides (R70370-R70418), which retain semaphorin receptor binding

CC activity. The semaphorin derived or semaphorin receptor binding

CC are potent modulators of nerve cell growth, immune responsiveness and

CC viral pathogenesis. They can be used in diagnosis and treatment of

CC neurological disease and neuro-regeneration, immune modulation and

CC diagnosis and treatment of viral and oncological infection and diseases.

 FT Nucleic acid molecule encoding CD100 antigen - which stimulates
 PT leukocyte response, e.g. B cell aggregation, differentiation,
 PT survival and T cell proliferation
 PS Example 8: Page 86-89; 135pp; English.
 CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
 CC protein that stimulates a leukocyte response, including B cell
 CC aggregation, B cell differentiation, B cell survival and/or T cell
 CC proliferation. Its amino acid sequence was deduced from a cDNA
 CC clone (T60666) isolated from murine T cells. Human CD100 antigen
 CC (W17657) has also been identified. CD100 polypeptides and fusion
 CC proteins, nucleic acids, and host cells expressing CD100 can be
 CC utilised in diagnostic and therapeutic methods involving modulation
 CC of B and T cell responses, neuron axonal growth and immune cell-
 CC nerve cell interaction.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Example 4; Page 69-72; 90pp; Japanese.
CC The present sequence represents human semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

Listing first 45 summaries

Database: pir60
1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 48.785; Variance 86.556; scale 0.564

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; Page 60-63; 101pp; English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

DR Nucleic acid molecule encoding CD100 antigen - which stimulates
PT leukocyte response, e.g. B cell aggregation, differentiation,
PT survival and T cell proliferation
PS Claim 7: Page 70-72: 135pp: English.
CC Human CD100 antigen (W17657) is a novel leukocyte semaphorin-like
CC protein that stimulates a leukocyte response, including B cell
CC aggregation, B cell differentiation, B cell survival and/or T cell
CC proliferation. Its amino acid sequence was deduced from a cDNA
CC clone (T60665) isolated by COS cell expression cloning. CD100
CC polypeptides and fusion proteins, nucleic acids, and host cells
CC expressing CD100 can be utilised in diagnostic and therapeutic
CC methods involving modulation of B and T cell responses, neuron
CC axonal growth and immune cell-nerve cell interaction.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Claim 1: Page 60-64: 90pp: Japanese.
CC The present sequence represents rat semaphorin W semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Example 4; Page 69-72; 90pp; Japanese.
CC The present sequence represents human semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

PT New polynucleotides and secreted proteins - obtained from human
PT foetal brain, human adult testes, human adult brain and human adult
PT salivary gland cDNA libraries
PS Claim 17j; Page 71-74; 110pp; English.
CC This sequence represents a novel secreted protein from clone CJ145_1
CC isolated from a human fetal brain cDNA library. This protein has
CC applications for nutritional use, cytokine and cell
CC proliferation/differentiation activity, immune stimulating or
CC suppressing activity, hematopoiesis regulating activity, tissue growth
CC activity, activin/inhibin activity, chemotactic/chemokinetic activity,
CC haemostatic and thrombotic activity, receptor/ligand activity,
CC anti-inflammatory activity, cadherin/tumour invasion suppressor activity,
CC tumour inhibition activity and other activities.

Statistics: Mean 48.540; Variance 75.079; scale 0.647

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are
PT potent modulators of nerve cell growth and regeneration
PS Example 2; page 60-63; 101pp: English.
CC The sequence of the human semaphorin III protein. The proteins
CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I (Q87445) or varicella major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor binding
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

 PT Nucleic acid molecule encoding Cdl00 antigen - which stimulates
 PT leukocyte response, e.g. B cell aggregation, differentiation,
 PT survival and T cell proliferation
 PS Example 8; Page 86-89; 135pp; English.
 CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
 CC protein that stimulates a leukocyte response, including B cell
 CC aggregation, B cell differentiation, B cell survival and/or T cell
 CC proliferation. Its amino acid sequence was deduced from a cDNA
 CC clone (T60666) isolated from murine T cells. Human CD100 antigen
 CC (W17657) has also been identified. CD100 polypeptides and fusion
 CC proteins, nucleic acids, and host cells expressing Cdl00 can be
 CC utilised in diagnostic and therapeutic methods involving modulation
 CC of B and T cell responses, neuron axonal growth and immune cell-
 CC nerve cell interaction.

 DR New human semafolin gene - useful in the diagnosis of nervous system
 DR PT and immune disorders
 PS Claim 1; Page 10-12; 15pp; Japanese.
 CC The present sequence represents human semaphorin (translated from the
 CC Japanese specification as semafolin). Semaphorin has nerve extension
 CC inhibiting activity. The semaphorin gene is useful for the diagnosis,
 CC treatment and researches on nervous diseases and immune diseases.

PT Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Example 4; Page 69-72; 90pp; Japanese.
CC The present sequence represents human semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jul 8 19:59:29 1999; MasPar time 17.63 Seconds
Tabular output not generated. 891.316 Million cell updates/sec

Title: >US-09-041-236-2
Description: (6-561) from US09041236.pep (44 of 45)
Perfect Score: 4130
Sequence: 1 WAAASAAQHLRSGPRIFAV.....TYSWRHKNVEQCEPGHQS 556

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28269293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 50.023; Variance 75.833; scale 0.660

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New class of semaphorin peptide(s) and polypeptide(s) - are

potent modulators of nerve cell growth and regeneration

PS Example 2; Page 60-63; 101pp; English

CC The sequence of the human semaphorin III protein. The proteins

CC encoded by the grasshopper semaphorin I (Q87441), human semaphorin III,
CC vaccinia virus semaphorin IV (Q87443), Drosophila semaphorin I and II
CC (Q87444-5), Tribolium semaphorin I (Q87446) or variola major (smallpox)
CC virus semaphorin IV (Q87447) genes were used to generate a series of
CC peptides (R70370-R70418), which retain semaphorin receptor binding
CC activity. The semaphorin derived or semaphorin receptor derived peptides
CC are potent modulators of nerve cell growth, immune responsiveness and
CC viral pathogenesis. They can be used in diagnosis and treatment of
CC neurological disease and neuro-regeneration, immune modulation and
CC diagnosis and treatment of viral and oncological infection and diseases.

PT Nucleic acid molecule encoding CD100 antigen - which stimulates
PT leukocyte response, e.g. B cell aggregation, differentiation,
PT survival and T cell proliferation
PS Example 8: Page 86-89; 135pp; English.
CC Mouse CD100 antigen (W17657) is a novel leukocyte semaphorin-like
CC protein that stimulates a leukocyte response, including B cell
CC aggregation, B cell differentiation, B cell survival and/or T cell
CC proliferation. Its amino acid sequence was deduced from a cDNA
CC clone (T60666) isolated from murine T cells. Human CD100 antigen
CC (W17657) has also been identified. CD100 polypeptides and fusion
CC proteins, nucleic acids, and host cells expressing CD100 can be
CC utilised in diagnostic and therapeutic methods involving modulation
CC of B and T cell responses, neuron axonal growth and immune cell-
CC nerve cell interaction.

DR Nerve extension inhibitor protein semaphorin W - is useful as
PT therapeutic drug and diagnostic and research reagent
PS Example 4; Page 69-72; 50pp; Japanese.
CC The present sequence represents human semaphorin W. Semaphorin W and
CC its derivatives are nerve extension inhibitors which are useful as
CC antiallergic, immunosuppressant and anticancer agents. The DNA
CC encoding semaphorin W can also be used in gene therapy, e.g. using
CC a viral vector. The proteins, peptides, DNA and antibodies which
CC recognise the protein or peptides, can be used as diagnostic or
CC research reagents. Semaphorin W can be used as a screen for
CC semaphorin W antagonists with possible therapeutic use.

Listing first 45 summaries

Database: pir60

1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 48.866; Variance 86.191; scale 0.567

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Run on: Thu Jul 8 20:03:05 1999; MasPar time 16.56 Seconds
Tabular output not generated. 940.780 Million cell updates/sec

Title: >US-09-041-236-2
Description: (55-605) from US09041236.pap (45 of 45)
Perfect Score: 4122
Sequence: 1 VVVGGRGVYLFDPCKNA.....GSYFRAQHWLLPDDGIMA 551

Scoring table: PAM 150
Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss:prot37
1:swissprot

Statistics: Mean 49.935; Variance 75.474; scale 0.662

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
